We are your Multibrand Distributor

Dear reader,

Preparation of product data – fast, brand-independent and based on facts: this is also our task as a multibrand distributor. And the comparability of products is our ultimate ambition here. This is because a constantly growing product portfolio continues to place great demands on us. Our principle is to maintain the overview and to select the optimal product for each application in the face of numerous products. We rise to this challenge and invite you to accompany us on this route. A first step was the conversion of our website in October last year. Beforehand, the products were presorted and therefore difficult to compare. Now, you can move freely through the product lists and filter according to your personal search criteria. The watchlist provides you with a user-friendly comparison function.

We are now pursuing a similar concept with the catalogue. We have also placed products next to each other in a technical logically order here, and we provide you with a direct comparison based on the most important features. You can therefore quickly gain an overview.

Clearly, all of this places high demands on our data management. The more different the products from our suppliers, the more different is often also the preparation of technical details. Anyone who has ever compared the datasheets from two manufacturers with one another knows how time-intensive this is. For your convenience we defined and logically sorted the most important features for each product group and standardised manufacturer data correspondingly.

Feedback welcome

We prepare our catalogue to support you in your work. Intense dialogue with you is therefore very important to us. Please let us know if you wish for additional criteria for product selection or if you would like to see other improvements in the catalogue. This will assist us in making our catalogue even better for you. Write to us at catalogue@videor.com or fax us the enclosed form. We are very interested in receiving your feedback.

Best regards,

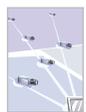

A handwritten signature in blue ink, which appears to read 'Thomas Grimme'.

Expansion and diversity

VIDEOR: Extensive range of products and services

We have been one of the leading European distributors of professional video technology for over thirty years. The company's wide product range covers components and integrated systems in the security, networking, imaging and broadcast sectors based on a strong purchasing position on global hi-tech markets as well as market knowledge extending over several years.

We are continuing our course of expansion witnessed by inauguration of our ComCenter in 2004 and our TechCenter ready for use since the spring of 2008. Sales of 65 million euros in the financial year 2007/2008 emphasise our leading market position.

10 Reasons why you should choose us

1. Large Selection

With over 30 suppliers and brands plus well over 4000 deliverable products, we offer you the truly largest selection in the sector. Furthermore, you can obtain some brands exclusively from us. And we are continuously extending our portfolio: our Product Managers specialised in your sectors permanently expand our product range by adding favourable and sophisticated new products.

2. Fair Prices

We offer you our products as well as our services at fair prices. We achieve this through repeated comparisons of market prices as well as working together constructively with our suppliers to optimise prices and costs. All of our achieved price improvements are passed directly on to the market, and therefore to you.

3. Easy Ordering System

We accept your order in a way that is the easiest for you: by telephone, e-mail, fax or on our website.

4. Efficient Logistics Centre

Our high-rack warehouse allows high stock levels and therefore optimum availability. Orders received by 12 o'clock are normally dispatched on the same day.

5. Technical Support

Our In-house Technical Support Team answers all of your questions before you decide on a product. Difficulties with installation of a purchased product? Our Technical Support team will be happy to assist you. Of course, we stay in close contact with all suppliers, which means we can clarify complex issues directly with just the right development department.

6. VIDEOR Service Team

Our Service Team is available for all of your maintenance, repair and product modification needs.

7. Audited Quality

We are not only certified compliant with DIN ISO 9001:2000, we also ensure our high product quality additionally: through tests, checks and supplier audits.

8. Up-to-Date Website

You can quickly find the right product for you on our website. Searching with clearly arranged organisation of hits as well as the option to filter by features make child's play out of finding the right product. The website is fully supported by our database and is therefore always up-to-date. In the customer area you can track your orders, download images, save and manage watch lists, generate price lists and even produce your own datasheets showing your logo and company information – without any mention of VIDEOR at all. A service tailored to resellers.

9. Optimally Informed

In addition to our customer magazine, newsletters, brochures and catalogues, and of course also our website, you can keep your knowledge at the state-of-the-art through our training courses and product presentations. Furthermore, we exhibit at all the major sector trade fairs.

10. Continuity

Long-term strategic planning guarantees you ultimate reliability. Continuity characterises all of our commercial operations. The statements we make today are also valid tomorrow.

Certified Quality

Customer satisfaction is our top priority. And clearly this has a major impact on the operations structured within our company. High reliability can only be achieved when processes are implemented by precisely specified operations. This covers orders, repairs, product inclusion in our portfolio, and inspections of incoming goods right up to dispatch of the customer magazine. Strategic forward-looking planning of our requirements and system adjustments are also included in our quality management targets.

We were certified compliant with DIN ISO 9002 as long ago as 1994, certification compliant with EN ISO 9001:2000 followed in 2002 and this was renewed in July 2008. Strict adherence to the high requirements set by the ISO standards is ensured every three years by external auditors from an international and independent auditing company.

www.videor.com – the next generation

Numerous new features increase considerably efficiency for our customers

Our website has been the central platform for communication of our product data for many years. The direct link to our Enterprise Resource Planning (ERP) combined with careful maintenance of our product data guaranteed up-to-date information every day, and it turned our website into a popular resource for our customers. With the next generation of our website, we have not only presented you with a new and modern design since October 2008, but in particular a large number of new features have been developed in response to substantial customer feedback.

New: Improved homepage for greater overview

Our homepage now greets you with the most important information surrounding our products, markets and the VIDEOR company. The new "Infocenter", where a clear overview of all documents and forms can be found in one place, is very practical. Under "Contact", in addition to contacts and the route-finder, you can also find information on becoming a partner and a contact form that you can also use to send us a copy of your trading licence.

From the homepage, you can of course reach your chosen product area with just one click on the navigation toolbar at the top of the page.

Product area main page: Clearer organisation of product information

In the product areas, you can find clearly set out information, which enables you to quickly pick out new products and technologies. The left-hand column presents you with individual product recommendations from our extensive portfolio. In the right-hand column you can find banners that lead to detailed reports about products, manufacturers, markets and technologies. Underneath you can see a list of further selected subjects.

We place great importance on: Improved product selection

Our constantly expanding portfolio required a new method of locating products quickly according to different criteria. It no longer made sense to pre-sort the products into fixed groups, as examining the products against the individual features required is very time-consuming. You now have the option to individually customise your lists of products via the choice of filters. You are now free to restrict our product range of IP cameras to a particular manufacturer or to select the video compression of your choice as your first step. The more features you select, the more the list of results decreases. There is no more effective way of finding a specific product. We have therefore introduced a completely new product database and overhauled all data.

The screenshot displays the Videor website interface. At the top, there is a navigation menu with categories: Company, Security, Imaging, Networking, Media, Production, Studio, and Support. A search bar is located to the right of the menu. The main content area is titled "Security" and features a prominent banner for "Sony now at Videor" advertising a complete Sony IP portfolio and selected analogue cameras. Below the banner, there are sections for "From our shop" and "Current topics". The "From our shop" section includes a product listing for the "DLS-16 Realtime Recorder" by Dallmeier, showing its price (EUR 2,685.60) and a "Add to watch list" button. Another product, the "RX-W19 Wide Screen Security: TFT Monitor", is also listed. The "Current topics" section features a banner for "New at Videor: Network Cameras from Basler" with a "read more" link. On the right side of the page, there is a user login area showing "Logged on as Max Muster" and a "Logout" button. Below this, there are links for "Our service, your possibilities" and "To customer area". At the bottom right, there is a "My watchlist" section indicating that the watchlist is empty.

Practical tips: Product search

Case 1: You are searching for a digital video recorder that has 16 channels and a 500GB hard disk

First option: You navigate via the left-hand menu structure to the recorder list (>Recording > Recorders) and then filter to the number of channels (Video inputs amount ->16) and the size of the hard disk (Hard disk capacity internal ->500GB).

Second option: You search for "Recorders" in the search box and then filter as described above.

Third option for search professionals: You search specifically for the features you require and connect them with a "+".

In our example you search for: **Recorder+16+500GB**

A hit list showing the matching products is immediately shown. Of course, you can now set other filters, e.g. by brand.

Case 2: You are searching for a day/night camera with WDR and 12Volt DC.

As the navigation procedure and input of a general search time followed by filtering should be clear, we now go directly to the professional search:

Search for: **Camera+WDR+12VDC**

As you can see, a selection of domes that fulfil the corresponding criteria is also displayed. Possibly this is suitable for you, and you will leave the domes in your list for the time being. If not, you can hide the domes by selecting the category filter.

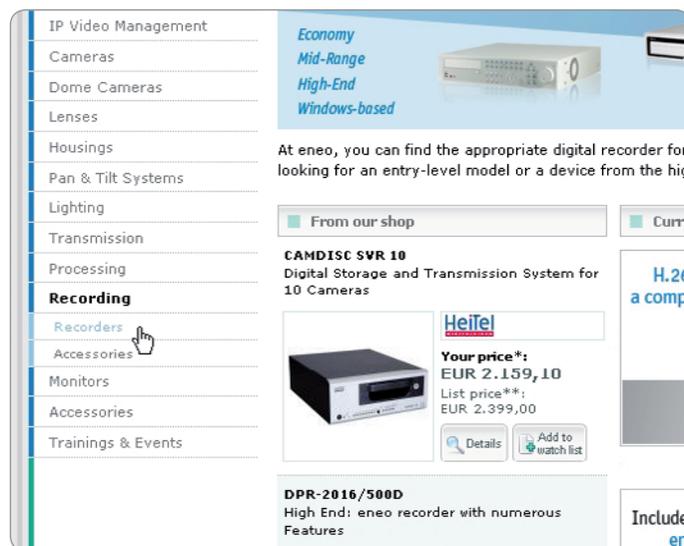

Case 3: You are searching for a lens with a variable focal length up to 8mm as well as a CS Mount.

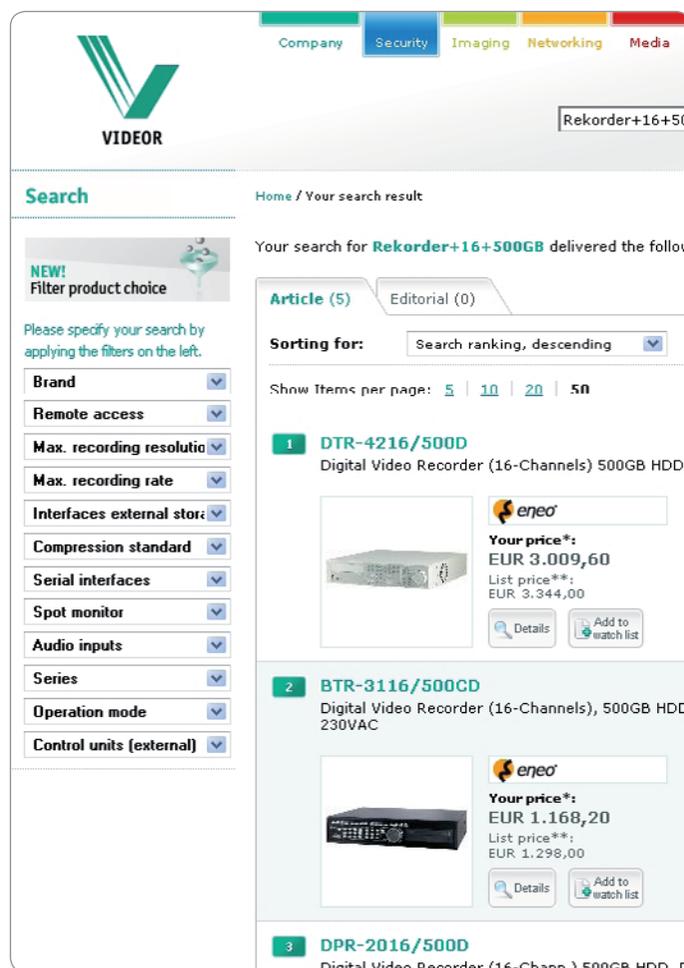

Search by: **Lens+8mm+CS vari**

Tip: If you had added the "vari" with a +, the hit list would be empty as the exact text string is searched for when a plus symbol is used. You would then have had to write "variable". However, as different manufacturers use different terms, such as varifocal, varifocus, variable focal length, ... it is advisable here to add the main component "vari" with an empty space. You therefore cover all variants.

Spend a little time practising these options, and you will then soon be able to considerably reduce your product search time.

(You can find a version of these practical tips with full screenshots of all steps at www.videdor.com by going to >Company >Info Center).

The screenshot displays the VIDEOR website interface. On the left is a vertical navigation menu with categories like Cameras, Lenses, Housings, and Monitors. The main content area features a large monitor image at the top. Below it, there are tabs for 'Basic features', 'Specifications', 'Product texts', 'Accessories', and 'Downloads'. The 'Accessories' tab is active, showing a list of optional accessories. The first item is 'PMK-01', a Pivot Mounting Kit for Neovo TFT/LCD Monitor Series, priced at EUR 50,00. It includes a product image, the Neovo logo, and buttons for 'Details', 'Add to watch list', and 'Add article to basket'. The second item is 'WMK-01', a Low Profile Wall Mount Kit, priced at EUR 50,00, also with similar details and buttons. On the right side, there is a 'My watchlist' section with a table listing items: Art.-No./Type and Amount. The table contains four rows: 90506 PMK-01 (1), 90461 WMK-01 (1), 93153 NTC-4101 (1), and 72753 DLS-16 PLUS (1). Below the table are buttons for 'Save/compare', 'Delete', and 'Copy to basket'.

New: Market-leading search technology even allows for typing errors

Our new search engine is market leading in Europe and is able to perform search functions even when typing errors are made. A third of the top 100 German mail order companies already use this technology. Of course, you also have the convenience of filtering product features after a full text search. What is more, we simultaneously search across the editorial pages and show you this result separately in its own tab. So you won't miss anything.

New: Clear overview of product details

There is so much information for most products that we have now structured it even clearer for you. In the upper part of the screen, you can find general and commercial information on the products. Information on prices and availability can be found here, in addition to photos of the product, the manufacturer's logo and texts. Underneath, you can find details about the products in a total of six tabs. Basic features include a choice of the most important product specifications and allow you a quick overview of the features as well as the product comparison. All technical data on the product, including basic features, is summarised in the specifications tab. Under the heading 'Product texts', you will find editorial texts on the product features which you can also use for your own publications and offers. The technical drawings in the corresponding tab can be enlarged by clicking on them. The accessories section is a completely new feature which itemises all accessories in a complete list, along with a picture, prices, availability and all further functions of the "large" list. Under 'Downloads' you can find all documents, media data and software associated with the product in clearly structured tables. Of course, as a logged-on user you are again able to generate an individual data sheet containing your logo and company address in this section.

PDF data sheets with the customer's own logo and address

Experienced users of the VIDEOR website can no longer imagine working without this function: data sheets are generated live from the database and are presented with your personal logo and

company address, provided that you have set this option under 'Customer area/Design options'. This function is ideal for resellers, because no reference is made back to VIDEOR during this stage. Therefore your customer will not be confused by a distributor address. And we have designed data sheets to be more neutral to make them more ideal for you.

New: Expanded availability information improves your planning

The new availability information gives you a more detailed insight and thus helps you with your planning. We use this to notify you of appropriate quantity limits and to inform you of whether we have the required quantity or a greater number in stock. Therefore the message "5+ ex stock" means that we have at least 5 of these items in stock. This will save you from many telephone calls with our sales department. In addition, you are shown further information on additional forecast quantities of available items, as well as detailed information on lead times for products not in stock. Therefore, the text "Delivery time: 1 week after order" tells you that we can supply you with the item within a week. Incidentally, the link "More information" provides not just a brief description of the new availability notice, but also a live request on the warehouse stock in our shipping warehouse in the U.K.

New: Watchlists with option to save

The watchlist is extremely suitable for compiling product lists quickly and without obligation. You can print the list, copy it into the shopping basket or save it to use later. This enables you to create an unlimited number of product lists for your projects in parallel and to edit them as often as you wish. You can also use the save watchlist option to create lists of your favourites or regularly ordered products. Tip: Whenever the watchlist administration area is accessed we check all product prices on the watchlists and inform you if a product is no longer available. You should therefore delete any watchlists you no longer need as this reduces your loading time.

New: Product comparisons

Practical tips:
Product selection using product comparison

Case 1: You are searching for a dome camera, if possible high resolution, with day&night functionality and a tinted bubble.

Step 1: Select >Dome Cameras >Fixed in the navigation menu

Step 2: Filter "Colour "bubble)" ->tinted and "System" ->day&night

Step 3: Use your personal criteria (price, product image, ..) or apply further filters (Brand, Protection rating, ..) to select three to five products and put them on the watchlist with the "Add to watchlist" button

Step 4: Open the watchlist administration area with the "Save/compare" button under the watchlist and then click on "Compare marked items"

A comprehensive product comparison is displayed and you can now select the optimal product for your application. In this example, you could opt for a product made out of aluminium or one with the suitable focal length.

Case 2: You cannot decide between a plug & play solution and an individual camera/lens combination.

Step 1: You place a boxed camera and a suitable lens on the watchlist using the selection steps described above

Step 2: You place comparable plug & play products on the watchlist (either with a comparable focal length or with comparable camera features, e.g. with WDR function or both)

Step 3: You display the product comparison as described above

You can now change the order the products are displayed to match your needs so that comparable products are next to one another. The order of features is always oriented on the first product in the lists. The lens features are therefore firstly listed when you move a lens to the front. This allows you to compare alternatives step-by-step and remove unsuitable models from the comparison. In our example, you will possibly conclude that a plug & play combination satisfies your needs and you can also save installation expenses.

(You can find a version of these practical tips with full screenshots of all steps at www.videdor.com by going to >Company >Info Center).

Sensitivity (at 50% video)	0,4 Lux	0,5 Lux	0,45 Lux

One of the most important innovations is the comparison function using basic features. Very interesting: The structure of our new product database means that you can also compare products from different product groups with each other, for example the lens of a dome with a standard lens, or the encoder of an IP camera with the encoder of a video server.

Monitoring your data and controlling printed documents

All users can change their profile as necessary, such as their user name, password, email address or telephone number, and manage their personal document profile for catalogues and the customer magazine. As the administrator, you have access to all user data, except passwords. Naturally, data administration and storage is subject to strict data protection requirements and only includes operational information.

New: Six user categories for different job profiles

In order to simplify the administration of your employee account at www.videor.com, we have created six different user categories with different rights on our website. This enables you to assign a suitable profile to every employee, from chief buyers to work experience students. The profiles encompass the following individual rights:

This rights system hides or conceals specific information on web pages for users. The administrator, i.e. at least one of your company's employees, is responsible for assignment of rights.

	Admin	Viewing list prices	Viewing net prices	Tracking	Ordering	Availability status
Admin	x	x	x	x	x	x
User category 1		x	x	x	x	x
User category 2		x	x	x		x
User category 3		x	x			x
User category 4		x				x
User category 5				x		x

Up-to-date price lists as PDF or Excel

Many customers have also valued this function for many years. Up-to-date price lists can be generated live, in PDF or Excel format, also displaying your company data and logo if required. These web pages now have a clearer layout on our new website, so now you have a complete overview of all available price lists in table form. In addition, we have brought together the range of manufacturer price lists, which are available as template documents, in their own menu item within the customer area. This is where you can also download a price list of fixed repair fees and service packages.

New: Saving different supplier addresses

This is an interesting expansion for customers who use our shop regularly: You can save different supplier addresses and re-access them when making subsequent orders. Practical for distributors who get us to deliver direct to their customers or onto a worksite.

Improved tracking of order data

You can now easily restrict the different types of order by pull-down menu according to the types of invoice, credit, order or return and sort them according to date. Furthermore, the tracking function with direct forwarding to the carrier's website (e.g. UPS) or the re-sending of old invoices by email are of course still available.

New: Quick order

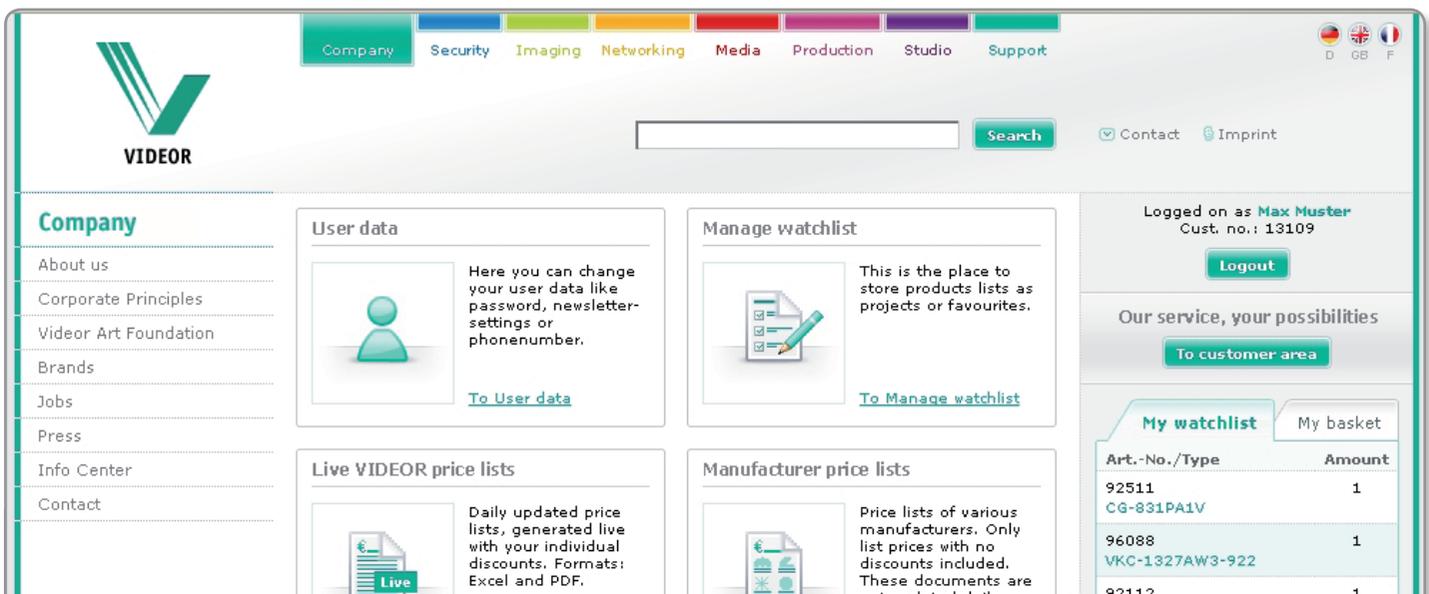

This practical form is now available for quickly purchasing up to 10 items by article number.

New: Search for downloads

In the "Support" area, you will now find a search for downloads as the first item in the menu. This is where you can search for a particular article by available downloads. You can then download the downloads directly from the search results list.

Everything live: Individual prices and availability direct from the ERP System

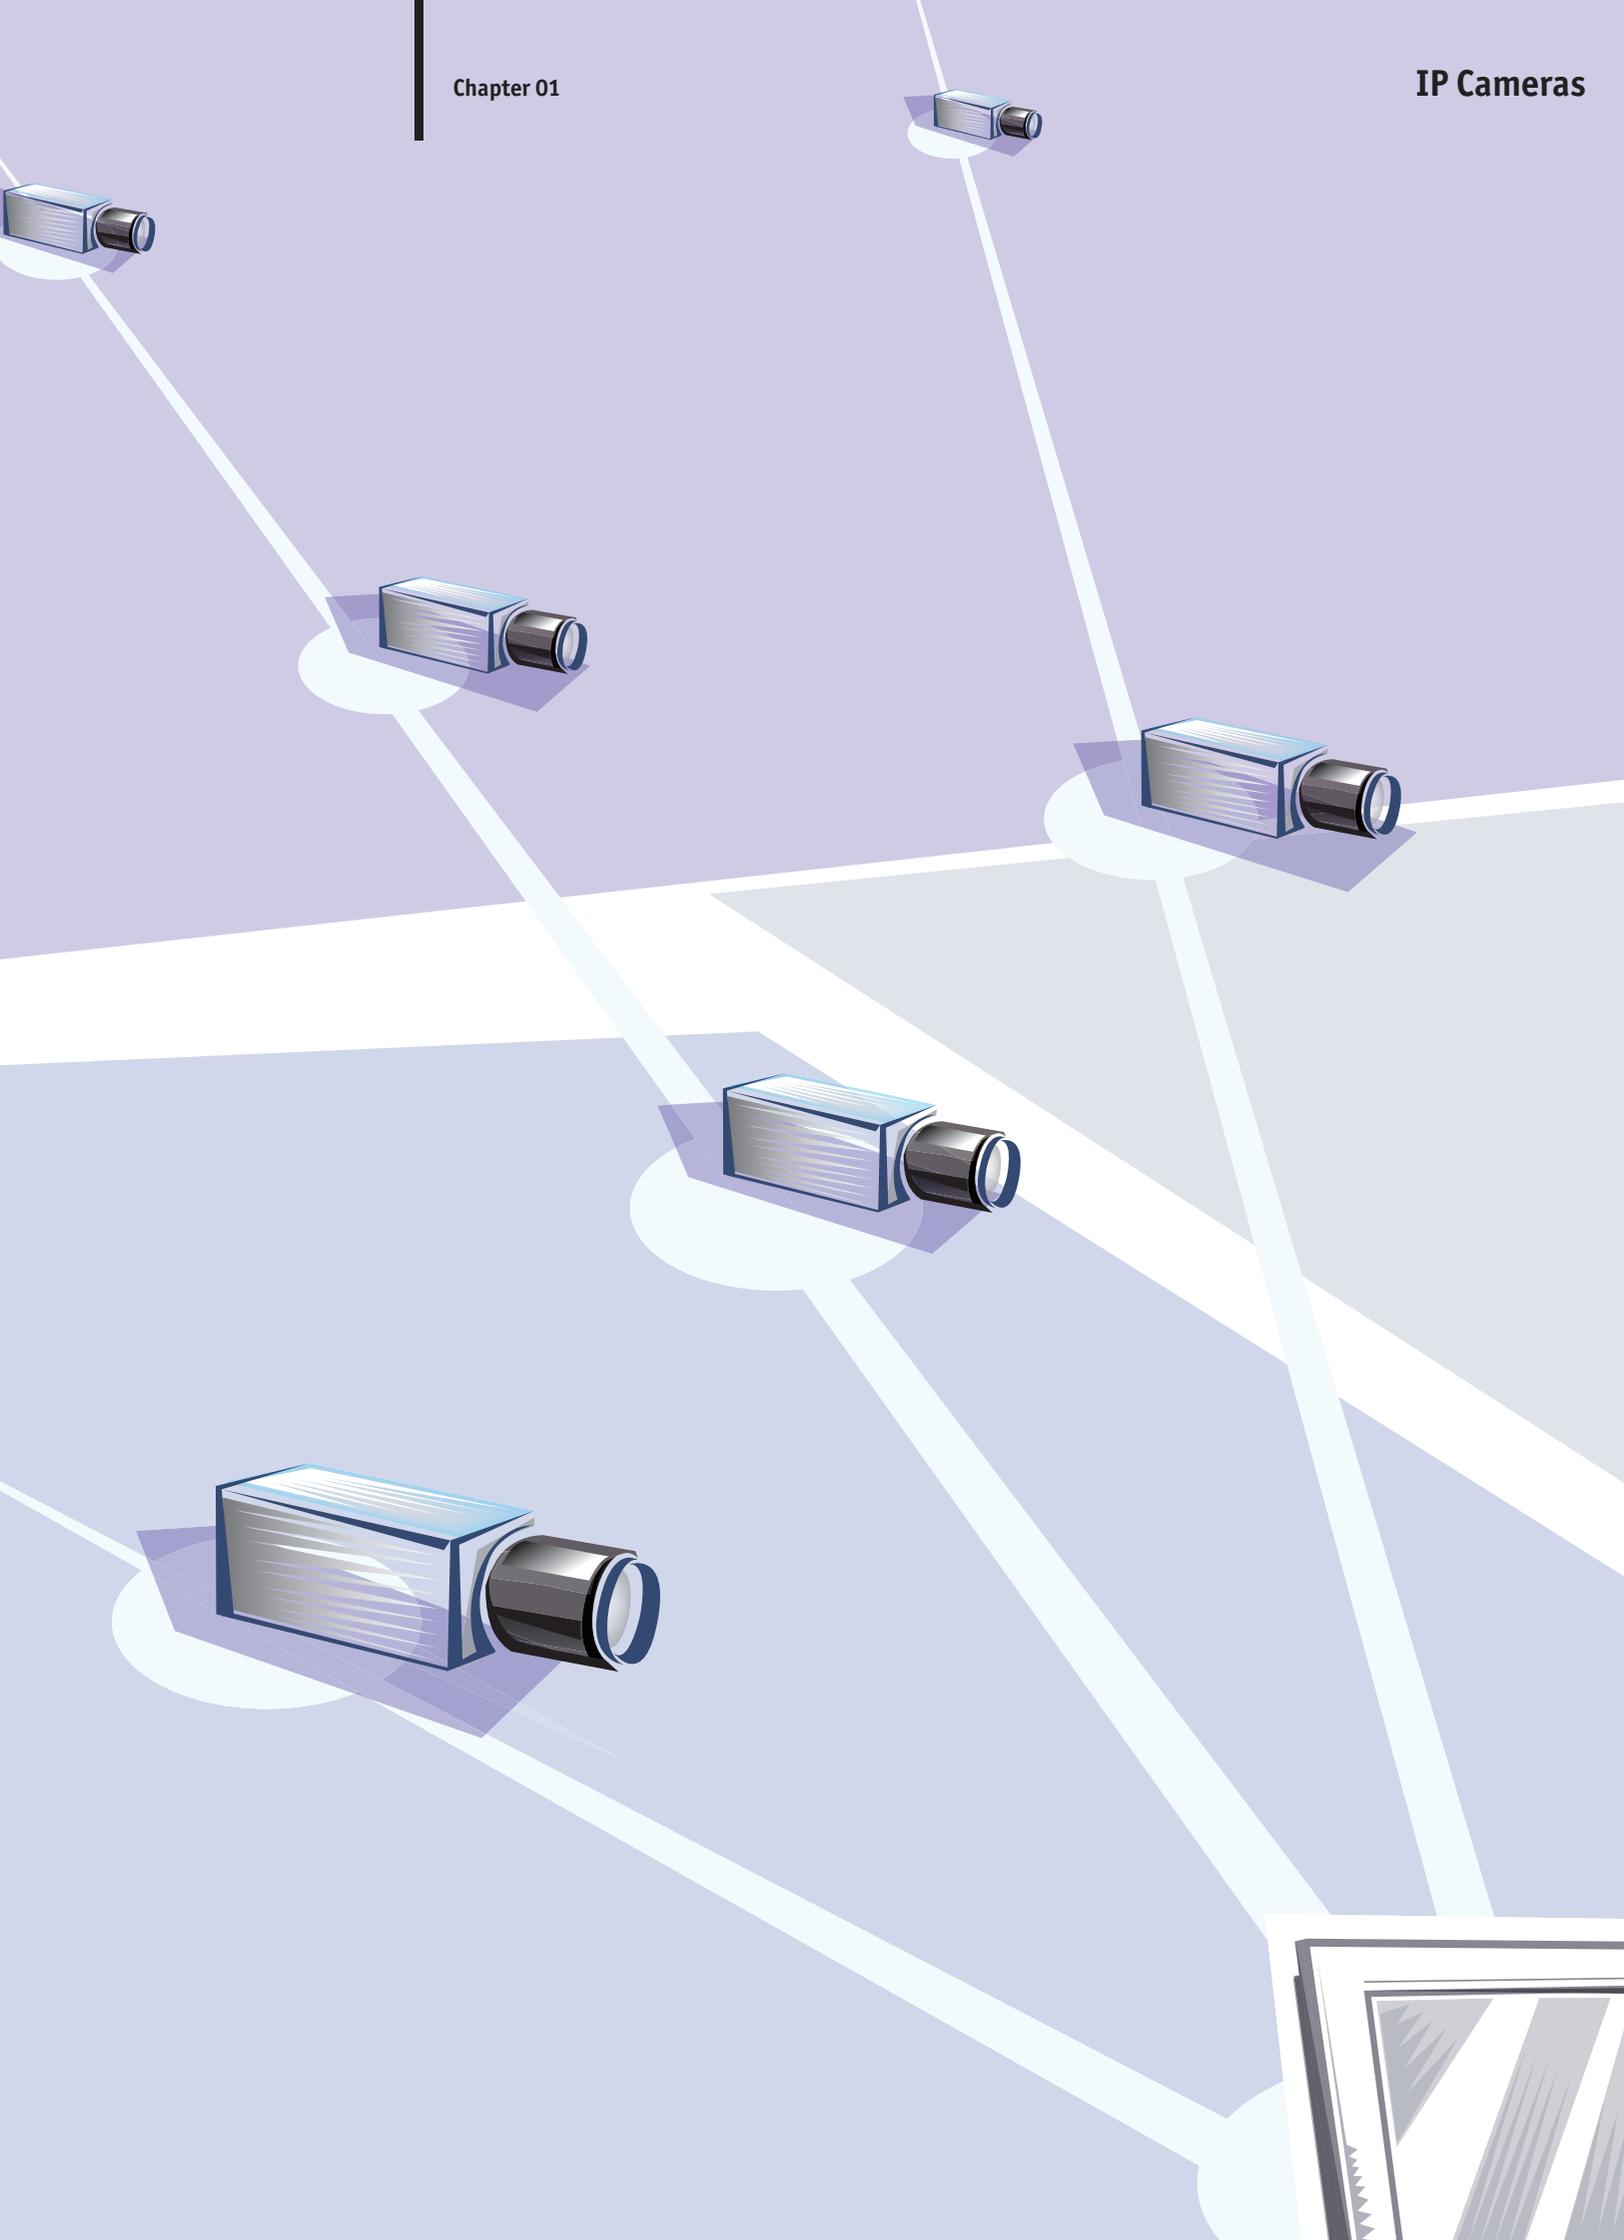

Everything on our new website is of course live and up-to-date. A completely new interface now not only reduces the time required for logging in, it also provides live access to our Enterprise Resource Planning system (ERP) on every web page. This allows you to make calculations and place orders online with greater reliability.

The screenshot shows the VIDEOR website interface. At the top, there is a navigation bar with tabs for Company, Security, Imaging, Networking, Media, Production, Studio, and Support. The VIDEOR logo is on the left. A search bar is in the center, and there are links for Contact and Imprint on the right. The main content area is divided into several sections:

- Company:** A vertical menu on the left with links for About us, Corporate Principles, Videor Art Foundation, Brands, Jobs, Press, Info Center, and Contact.
- User data:** A section with a user icon and text: "Here you can change your user data like password, newsletter-settings or phonenumber." with a link "To User data".
- Manage watchlist:** A section with a watchlist icon and text: "This is the place to store products lists as projects or favourites." with a link "To Manage watchlist".
- Live VIDEOR price lists:** A section with a price list icon and text: "Daily updated price lists, generated live with your individual discounts. Formats: Excel and PDF." with a link "Live".
- Manufacturer price lists:** A section with a price list icon and text: "Price lists of various manufacturers. Only list prices with no discounts included. These documents are".
- Right sidebar:** Shows the user is logged in as "Max Muster" (Cust. no.: 13109) with a "Logout" button. Below that, it says "Our service, your possibilities" with a link "To customer area". At the bottom, there is a "My watchlist" and "My basket" section showing a table of items:

ActiveX component

A maximum of 10 users can simultaneously access a NT Series network camera. An ActiveX component is required to display imagery correctly. This component can either be installed directly from the camera or the enclosed CD.

IP Setting Utility

NT Series network cameras do not have a preset IP address. The address can be configured with the supplied software tool "IP Setting Utility" by using the 12-digit MAC address printed on a label on the camera. This allows the IP address to be configured to your network requirements. The default IP address of the GL-Series is 192.168.1.168

NT Manager and GL Manager

NT Manager comes bundled with NT Series network cameras as the management software; it is the GL Manager for GL Series cameras. However, each version of the management software can only manage its own models, mixed operation is therefore not possible.

SDK and SPI descriptions

SDK and SPI descriptions for GL and NT Series network cameras can be requested from Videor free of charge for implementation in a customised software solution.

! Network Camera or Server?

Video servers are ideal in combination with analogue CCTV cameras when special requirements are placed on the camera that cannot yet be satisfied by network cameras. For instance, day/night cameras with special lenses or wide dynamic range cameras that are operated in extreme lighting conditions. Moreover, video servers can make video surveillance systems network capable without having to replace existing hardware.

! Ethernet

Ethernet is the technology normally used for local networks (LAN) today. It is available in 10 Mbps, 100 Mbps and 1 Gbps network versions. An Ethernet LAN normally uses category 5/6 cables.

IP VIDEO MANAGEMENT

Aimetis Symphony™ with business intelligence

Netavis Observer 3 with analysis toolkits (iCAT)

Aimetis Symphony™

Aimetis Symphony™ is an award-winning video management and analytics software platform for analog and network cameras. With an open,

standards-based architecture as its foundation, combined with analytics, Aimetis Symphony™ provides the product roadmap to help migrate analog "record only" installations to intelligent network video for security and business intelligence. Aimetis Symphony™ software offers many real world benefits that solve

true business problems: remote accessibility, powerful report generation, COTS (commercial off-the-shelf notebooks, PCs and servers) hardware support, scalability and flexibility, and cost-effective installation and maintenance.

With three camera license options available (Standard, Professional and Enterprise), Aimetis Symphony™ allows security and information technology (IT) business managers flexibility through its commercial versatility. Customers can mix and match camera licenses based on their functionality needs, integrate both analog (CCTV) and network cameras, establish alarm rules, and customize the user interface - all on the same PC. Aimetis Symphony™ software also supports all major network camera manufacturers resulting in a cost-effective and efficient deployment in hybrid environments. Such flexibility makes Aimetis Symphony™ software an easy choice for anyone considering migrating from CCTV to intelligent network video deployments. Featuring a highly customizable graphical user interface, Aimetis Symphony™ software can search and display specific incidents of video immediately, significantly reducing the searching time. In seconds, video data is compiled and presented that enables security professional to make real-life decisions based on real-time information.

Aimetis Symphony™ software comes with a comprehensive menu of business information reports for people counting (count and graph), dwell time, occupancy, activity level / congestion, traffic flow patterns, and high alarm / risk areas. Organizations can leverage both their existing analog and network systems to provide real-time business intelligence information to architects, developers, traffic analysts, marketers and managers who analyze and plan business requirements.

Standard License – Recording

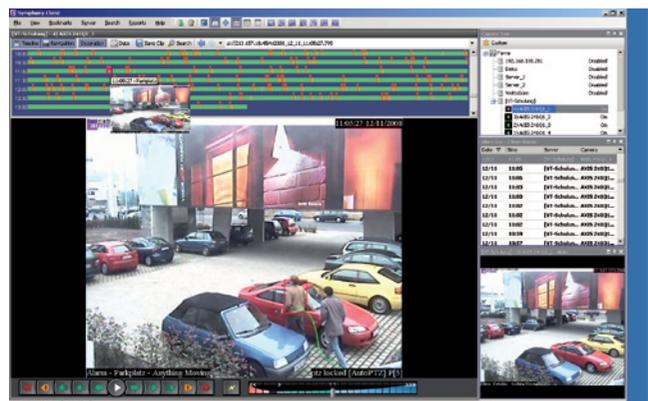

The Aimetis Symphony™ Standard License contains core video recording features from network and analog cameras such as remote live view, video playback, multisite capability, integrated PTZ control and an integrated sitemap for easy navigation. The Standard License is an entry platform for IP-Surveillance and ideal for users looking for basic video recording functionality but want a migration path to video analytics for future use.

Professional License – Management

The Professional License contains all the core video recording features of the Standard License plus robust event management integration from devices such as camera alarms, I/O devices, access control and other sensors integrated with our intelligent Time Line feature. This enables the quick and efficient retrieval of specific events without having to manually review all video recordings. All compiled video events can also be forwarded in real-time to other users in multiple locations anywhere in the world.

Enterprise License – Intelligent Management

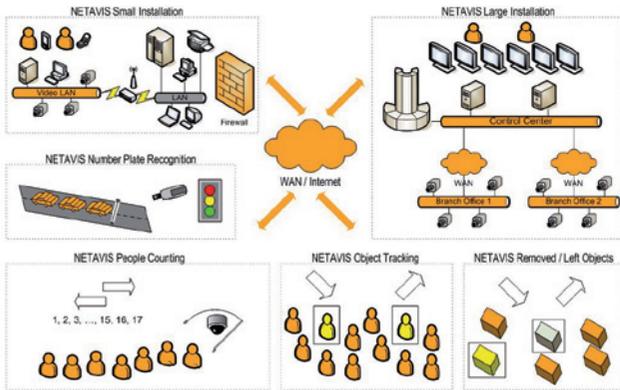

The Enterprise License is designed for applications requiring real-time intelligence on camera feeds with enhanced event-based search capabilities. With Aimetis Symphony™ Enterprise License running on a camera, objects in the scene under surveillance are tracked and classified, providing real-time video information as it happens through its alarming function. The Enterprise license also features automatic control of PTZ cameras as well as many intelligent features such as 'Smart Search' and business intelligence reports that are critical for more sophisticated implementations.

Netavis Observer 3

NETAVIS Observer 3 is an open, secure and robust software platform for IP-based audio and video surveillance offering live viewing, recording, video analysis and alarm management. It is totally scalable, runs on standard hardware and allows easy integration with many different security systems and business applications. NETAVIS Observer 3 augments the already existing features of Observer II by the toolbox iCAT. This is a module for Video Analytics, developed by NETAVIS. Additionally it serves as generic interface available for external applications. With NETAVIS Observer 3, the video format H.264 and substantial improvements in support of mega pixel cameras will be offered in addition. The video content analysis toolkit (iCAT) offers a set of powerful algorithms for object detection, tracing and counting. It is easy to setup with only a few parameters. The following image analysis functions are offered:

iCAT Object Detection and People Counting

Detection of percental changes based on a detection of changed pixels between video frames. You can specify various settings like "pixel change threshold in percent" or "the duration between events" to improve the detection results. Depending on the settings iCAT currently detects moving objects at least 8x8 pixels or bigger in size. The detections of new objects can be adjusted via sensibility setting and the associated events will occur after just a few video frames.

People Counting is the detection of target-oriented motions for video based customer current analysis or passer-by frequency counting. After defining your tracking region you can establish an arbitrary number of event triggers inside. For people Counting Smart Tripwire™ is used as the event trigger, because this technology is appropriate for directional counting.

So if you want to count objects in two directions you just need to create two appropriate tripwires.

iCAT Time Constraint

Residence time of an object inside is longer than defined. You can select that you want to trigger an event when an object stops in a defined field. You can also define when an event is triggered by either selecting object center point, any point of object, or whole object. In the field Min. time for stopping, staying inside (sec) you can enter a minimum time required for an object that either stops or stays inside a field before an event is triggered. In addition you can also define further constraints for the event trigger. You can limit the counting only to certain object sizes, certain aspect ratios, and a certain speed.

iCAT works with any camera that can deliver an MJPEG or MPEG4 stream (this covers also analog cameras that are connected via a video server or directly connected to a video grabber card in the Observer II server). It is easy to configure and setup and it works in difficult situations also with extreme camera perspectives and it offers flexible scheduling of iCAT definitions depending on date and time. Thus you can have different setups for weekdays and weekend as well as day and night.

IP VIDEO MANAGEMENT

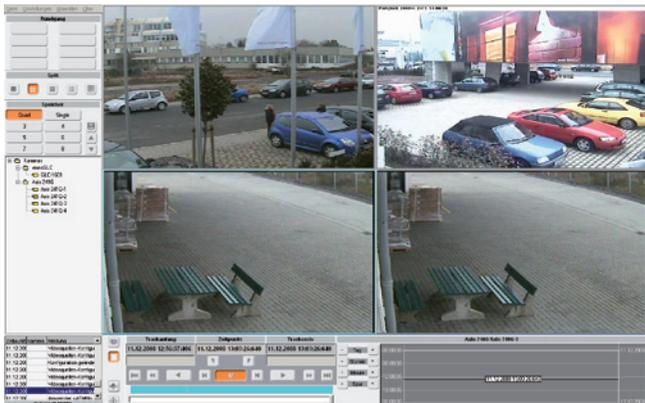

eneo Zelaris_IP: Seamless integration into external systems

eneo Zelaris_IP

Zelaris_IP is not conceived as an isolated solution for video management, but rather a seamless solution that can be integrated into external

systems on account of the multitude of open interfaces including the OPC Client and OPC Server. In addition, eMail notifications, FTP transport, an integrated WEB server and a wide range of optional interfaces for the security and construction services are available. Depending on the video source, MJPEG, MPEG-4 and H.264 video formats are supported with resolutions of up to 16 MPixels, and interfaces currently exist for more than 250 different video sources from over 50 manufacturers. A unique quality of Zelaris_IP is that DVRs (Digital Video Recorders) from a range of well-known manufacturers, together with analogue video systems such as matrix switchers can be directly integrated into the video

management. Zelaris_IP can be expanded to incorporate additional functionality to enable the remote control of video walls. Recording can be carried out on a continuous basis or be event-driven by means of contacts, interfaces with external systems, manual operation or by timetables and movement detection. Analysis can be performed on up to 25 video sources simultaneously and be synchronised with analysis of DVR archive data. This allows for time searches and searching for events and motion. As an export format, both individual images and AVI streams are possible.

A graphical user interface together with a script language provides a user-friendly way of executing even complex video systems, and import interfaces to AutoCAD, DWG and DXF provide support for the creation of graphics. The program interface is ergonomically designed and only displays those controls that are available to the user. 25 freely scalable video windows are available on the workstation for displaying images, which can be distributed over any number of screens as either split screen displays or presets.

For all Zelaris_IP licence holders, regular updates are available free of charge, providing extended functionality and interfaces to new video systems.

Zelaris_IP V04

Zelaris_IP V04 is the gateway to the world of digital video management and the ideal solution for small-scale surveillance operations with up to 64 video sources on a single workstation. Configuration and video data are compatible with the Client/Server systems, and following an upgrade, can continue to be used seamlessly. Recording is limited to MJPEG format.

Zelaris_IP S04

With an integrated server licence, Zelaris_IP S04 forms the basis of large-scale and efficient video surveillance systems. Depending on the hardware being used, it is possible to record up to 64 video channels, totalling up to 1600 images/seconds on one server. MJPEG, MPEG-4 and H.264 video recording formats are available, depending on the video source. A load balancing and backup function are integrated into the system for use in the construction of highly accessible server systems. The software is

BGV certified with an I/O interface for use with POS terminals. A particular feature of the Zelaris_IP V04 is the ability to remove mirrored video data from alternate frames during operation when using a special RAID-1 hard drive system, and to then directly analyse this on a separate workstation by means of USB drives.

Zelaris_IP VC

The Zelaris_IP VC Videoclient serves as a workstation for remote access to the Videoserver and allows for remote operation of the video walls.

Zelaris_IP HL-B

The Zelaris HL version serves as a workstation for large-scale surveillance systems, providing for up to 16,000 video sources and meets the requirements of central control centres operating in the security and financial sectors, as well as in the police service.

! Aimetis Dome Tracking Software

Absolute dome tracking using the Aimetis software is only possible when data can be simultaneously sent and received over the RS-485 interface. This requires a 4-wire link between the dome and the RS-232/RS-485 interface converter, as is possible with Fastrax Domes for instance. On the other hand, only relative dome tracking is possible with the Fastrax Plug & Play Domes that only have one 2-wire RS-485 interface. Videor will happily advise you on the choice of the right dome for your Aimetis tracking application.

! Server

Other applications are fundamentally not to be installed on a PC used as server for a video management program, as proper functionality can no then longer be ensured. Please be sure that all Microsoft updates are installed (i.e. Service Packs and Net Framework).

! Camera categorisation

Boxed cameras are categorised as follows in the catalogue:

1. Day/Night cameras have an integral removable or low pass infrared cut filter.
2. Colour cameras have solely a CVBS video output. These models are useable for 24-hour video surveillance with some limitations. eneo cameras in this category have a filter with special characteristics that supports colour operation as well as high contrast BW pictures with infrared illumination.
3. Black/white cameras are models with a video output capable of delivering a VBS signal.

Comments	Lens is not included				

! Resolution

The deciding factor for resolution or reproduction of detail is not the CCD's size, but the number of active pixels. These are normally determined by the number of horizontal and vertical pixel's, i.e. 752 x 582 pixels. Horizontal resolution is the number of vertical TV lines that the camera can visibly reproduce across the whole image width.

! Low voltage cameras

An external power pack, such as a transformer, or an installed power pack must normally be provided for low voltage cameras in weather resistant housings.

! Dynamic range

Day/Night lenses with a highest possible f-number, e.g. f-360, are recommended for full utilisation of the camera's dynamic range with the DF3000A.

! Basic board cameras

Basic board cameras have some limitations for outside use. The ESC (Electronic Shutter Control) function is not adequate when, for instance, in compensating for dazzling sunlight. It would be advisable to use a camera with a controlled shutter (DC/AI) in this case.

! Vandalism-proof camera systems

You can also find board camera housings in this catalogue. For applications in highly vulnerable areas we offer plug & play packs of vandalism-proof camera systems.

! Index of Protection

„IP“ stands for „International Protection“, an internationally specified standard for protection against contact and foreign particles (1st digit) and water (2nd digit). Accordingly, „IP67“ indicates „dust tight and complete protection against contact“ and „protection when immersed in water for 30 min.“.

! Silica gel bag

When a Candid Junior W3 housing is opened it is possible that some air moisture may enter. We therefore recommend that the enclosed silica gel bag is used to counter this. However, do not open it too early, as it will quickly attract moisture and therefore become ineffective.

! RS-485 installations

Incorrect wiring is the most frequent cause of faults for RS-485 installations. Please ensure that the RS-485 cable configuration routed to the cameras has a ring topography. The last dome is to be terminated with 120 Ohm. All interstage domes are not terminated. Please use a star hub (e.g. PDU-1) for star topography cabling; all domes are terminated at the end of the cable with this cabling configuration.

Faults can also be caused by electromagnetic radiation, as the level of the RS-485 interface is only 5V. Please ensure that shielded cables are used and the shield is earthed at one end.

! Day/night Function

The Fastrax Domes deliver natural colour rendering during bright daylight conditions. At night or when the light has dropped below a particular level they can switch over to a B/W signal automatically or manually. In order to ensure optimum responsiveness even in the infrared range, this is supported by a retractable infrared cut filter that eliminates the disruptive infrared light component in daylight.

! Privacy Zone Box

The Privacy Zone Box (92152) is connected between the camera and the recorder. A shortcut key combination can insert a rectangle of any size with different brightness (called a "Privacy Zone") in an analogue video signal. This "Privacy Zone" can cover the PIN pad at ATMs to make the PIN invisible to security staff, for instance. Password protected operation ensures high security. The Privacy Zone Box can also be used for cameras made by other manufacturers.

A series of horizontal dashed lines for taking notes.

! Rated format

Rated format means to configure the lens for a specific sensor format (1/4", 1/3", 1/2", 2/3" or 1"). The rated format must be at least the same or higher than the camera sensor format.

! C or CS mount

A C mount lens can be used on both C mount and CS mount cameras (with a 5mm adapter ring for CS mount). However, a CS mount lens is NOT suitable for a C mount camera.

! Preset zoom lenses

The lenses have an integral potentiometer that tracks zoom and focus movements. This allows a reversible, automatic return to a previously stored zoom and focus position. All of our zoom lenses can be delivered with or without the preset function.

! Why are there IR-corrected lenses?

Standard lenses are designed for visible wavelength range from approx. 450 to 700nm. Two problems are produced if lenses are to be used in daylight and infrared illumination. One is that the Modular Transfer Function (MTF) is considerably reduced above 700nm. The other is that the focus point changes. Lenses with IR correction compensate for this condition to a great extent by pushing the transmission curve maximum into the near-infrared range (700 to 1000nm) and there is a special compensation that practically negates the focus shift.

! Varifocal lens

A varifocal lens allows the focal length to be set approximately during project planning. The precise focal length is set on site. This allows, for instance, one lens type to be used for all the cameras in a system.

! Distortion

Distortion is described as being the variance between the geometric figure of the object and the depiction on the light-sensitive CCD sensor. If objects are reproduced distorted, as a pincushion or barrel-shape for instance, this is called a distortion in the optical field. Distortion is given as a percentage deviation of the distorted pixel from the geometrically correct location. Our lenses for industrial image processing minimise this effect.

! Lens adjustment

It is necessary to adjust the camera flange focal distance to achieve optimum results when you use a zoom lens. You can find further information on this in the camera's user manual.

! Zoom lenses

Zoom lenses have a variable focal length, which can be adjusted manually or by a motor. The first value gives the minimum focal length and the second one the maximum focal length. As compared to varifocal lenses, the sharpness remains constant over the whole zoom range once the lens has been correctly adjusted.

HOUSINGS

The IP Code classifies the degrees of protection provided against the intrusion of solid objects, dust, and water in electrical enclosures

The IP Code (International Protection Rating, sometimes also interpreted as Ingress Protection Rating) consists of the letters IP followed by two digits. It classifies the degrees of protection provided against the intrusion of solid objects, dust, accidental

contact, and water in electrical enclosures. For outdoor use we recommend a rating of at least IP65: dust tight and protection against water jets.

The first digit indicates the level of protection that the enclosure provides against access to hazardous parts and the ingress of solid foreign objects.

Level	Object size protected against	Effective against
0	-	No protection against contact and ingress objects
1	>50 mm	Any large surface of the body, such as the back of a hand, but no protection against deliberate contact with a body part
2	>12.5 mm	Fingers or similar objects
3	>2.5 mm	Tools, thick wires, etc.
4	>1 mm	Most wires, screws, etc.
5	dust protected	Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity; complete protection against contact
6	dust tight	No ingress of dust; complete protection against contact

Protection of the equipment inside the enclosure against harmful ingress of water (Second digit)

Level	Protected against
0	not protected
1	dripping water
2	dripping water when tilted up to 15°
3	spraying water
4	splashing water
5	water jets
6	powerful water jets
7	immersion up to 1 m
8	immersion beyond 1 m

! Heating elements

PTC-based heating elements are installed in the VHL, VHM and VHB series of housings for keeping the front screen clear. However, the power consumption peaks at approx. 10 to 15 times higher at switch-on. This means the built-in power supply units listed in the accessories cannot be installed for the 12-30V low-voltage heaters. The Heater power consumptions are listed in the datasheets for individual housing models.

! eneo VHM housings

Because of the hinged housing body VHM housings are very easy to install and to maintain. In addition they feature:

- 4 levels of camera height adjustment
- insulated camera mounting
- external central plug (optional)
- viewing screen with „Clear-Shield“ technology
- integral carrier handle
- wide range of accessories

! Clear Shield

All VHM series housings are fitted with Clear Shield technology at no extra cost. This surface protection considerably reduces cleaning requirements and prevents corrosion. Clear Shield is UV resistant, colour neutral and fully light transmissive (100% light transmission). Of course the Clear Shield surface protection is non-flammable.

Index of Protection

„IP“ stands for „International Protection“, an internationally specified standard for protection against contact and foreign particles (1st digit) and water (2nd digit). Accordingly, „IP67“ indicates „dust tight and complete protection against contact“ and „protection when immersed in water for 30 min.“.

! Planning a pan/tilt system

In addition to the maximum load, the load distribution (camera/housing/accessories) must be considered when planning a pan/tilt system. Pan/tilt heads with a side camera mount have the advantage over overhead mounts as the load centre can be positioned better. The height of the camera mount can be adjusted and the maximum torque and torque direction is noted in our data-sheets for every model.

! Index of Protection

„IP“ stands for „International Protection“, an internationally specified standard for protection against contact and foreign particles (1st digit) and water (2nd digit). Accordingly, „IP67“ indicates „dust tight and complete protection against contact“ and „protection when immersed in water for 30 min.“.

! Multi-protocol capability

As opposed to its predecessors the VPT 41/42, VPT-501 and VPT-601 P/T systems have multi-protocol capability and support the following protocols: VIDEOR, Fastrax IIE, Pelco D&P, Siemens, Philips; each of which with an adjustable baud rate.

! Control

There is a TX-BAB translator board For the Pelco Esprit series, which allows control of the Esprit's with Philips or Sensormatic protocols in addition to the normal Pelco Coaxitron controls.

! Weight

Don't lose sight of the overall weight of your system. The combination of camera, weather-resistant housing, pan/tilt head and infrared light can easily exceed 15kg.

! Maximum ranges of our infrared illuminators

The stated maximum ranges of our infrared illuminators can only be achieved when the following conditions are satisfied:

1. The camera has good sensitivity in the infrared illuminator's wavelength range.
2. A lens with a relative aperture of at least F 1.4 should be used on the camera. In addition, only day/night lenses should ever be used in order to prevent sharpness problems arising from the wavelength being different from that in daylight.
3. Furthermore, the range is dependent upon the capability of the radiated object to reflect infrared light. For instance, a white wall has much better reflection than black asphalt. The reflection characteristics are sometimes completely different than in visible light; plants reflect light strongly in the near infrared range. We assume an average reflection factor for the radiated objects in the ranges we specify.

! Raytec RM300 Illuminators

Raytec RM300 Illuminators come with an integral twilight switch. An external switch contact can switch on all illuminators together over an external twilight switch. And the illuminators can also be switched on by day/night cameras when they also have an external switch contact.

! Important Advice

Do only use infra-red halogen illuminators with the indicated power supply.

! Does IR light damage the eyes?

In some circumstances yes, as the human eye cannot perceive the wavelength of infrared radiation as visible light, i.e. the eye's iris does not react to infrared light. This may cause irreparable damage to the retina. On the other hand, a weak IR illumination is used in diagnostics to examine the ocular fundus. Nonetheless, care should be taken with all lights used in surveillance when their power normally exceeds the permissible value.

! Distances for IR light

A minimum distance of 1.5m should be adhered to for direct illumination with infrared lights in order to avoid eye damage. Distances under 1m must be regarded as being hazardous even for a short visual contact.

! Infrared lighting

Lighting in the near-infrared spectral range, nearly invisible for the human eye above a certain wavelength. Light emission is normally designed to start at a wavelength of 715nm (semi-discrete) right up to 950nm (fully discrete).

Troubleshooting Guide for relay of video signal

Advantages of Nitek twisted pair

VIDEOR supplies a comprehensive range of products enabling the relaying of video signals. The type of relay system that is right for your own particular application primarily depends upon the distance to be covered. As the installation of the right type of relay technology also depends upon the conditions at the rel-

evant locations, the information given in this document should only be taken as a recommendation. Alongside the solutions proposed here, we can also supply products for relay by radio link and these are especially suitable in cases where the relay must take place across obstacles, such as railway crossings.

Asymmetric coaxial cable

Cable type:	Typical attenuation at 6 MHz:	Maximum distance
RG59 coaxial cable	3dB / 100 metres	100 metres (digital recording)
RG59 coaxial cable	3dB / 100 metres	150 metres (surveillance)
RG11 coaxial cable	1dB / 100 metres	300 metres (digital recording)
RG11 coaxial cable	1dB / 100 metres	500 metres (surveillance)

The distances given here may be substantially exceeded in the case of cameras with switchable cable compensation.

Symmetric cable CAT2-5 (UTP) 24AWG (unshielded twisted two-core cable)

Transmitter:	Receiver:	Maximum distance
Passive	Passive	225 metres (digital recording)
Passive	Passive	350 metres (surveillance)
Passive	Active	800 metres (digital recording)
Passive	Active	1000 metres (surveillance)
Active	Active	1800 metres (digital recording)
Active	Active	2200 metres (surveillance)

If several video signals are to be relayed using the same cable, the maximum coverage distances are substantially reduced. If existing cables are to be used, we recommend that the capacity of those cables be measured. The capacity should not be higher than 57pF per metre.

Fibre-optic cabling

Cable type:	Typical attenuation at 6 MHz:	Maximum distance
Multimode 62.5/125µm	13 - 17 dB optical budget	3 - 4 km
Multimode 50/125µm	13 - 17 dB optical budget	approx. 10-15% lower (3 - 4 km)

Up to 8 video signals can be relayed via each multimode fibre. Data interfaces (RS232/422/485), contact interfaces and audio signals may optionally be transmitted along the same fibre.

Cable type:	Typical attenuation at 6 MHz:	Maximum distance
Single mode 9/125µm	15 - 30 dB optical budget	40 - 80 km

Up to 64 video signals can be relayed via each single mode fibre. Data interfaces (RS232/422/485), contact interfaces and audio signals may optionally be transmitted along the same fibre. A drop and insert configuration may optionally be used to enable video signals and data interfaces (uni-directional reception) to be sent or transmitted at several locations via the same single mode fibre.

Optical Budget: Most important factor in planning of a fibre optic link

Optical Budget

The most important factor in planning a fibre optic link is the optical budget, which represent the totality of all factors that influence the range on an optical transmission link. The light entering a fibre optic line experiences damping factors on the transmission link. The total optical budget therefore needs to be larger than the losses created on the link due to plug connections, splices and of course the fibre optic cable itself: it must therefore be ensured that the damping factors at the end of a transmission link plus a safety margin are not larger than the available optical budget. If the optical budget is not large enough, optical amplifiers must be used to increase the budget.

Simultaneously, potential overloading of the optical receiver due to insufficient line attenuation must be prevented and attention must be given to establishing a suitable balance and the transmission power damping. This is to be considered particularly over long distances via single-mode fibre optic. Manufacturers therefore usually offer devices with different performance classes, from which the suitable transmitters and receivers can be selected for the relevant application.

The optical budget is therefore the level analysis of the fibre optic link: it starts with the feed level of the transmitter, continues over the damping values of the fibre optic cable, in which the length as well as the damping values of the connector components play a role, and ends with the sensitivity of the optical receiver. Of course, the increase in the level through amplifiers also plays a role. Compliance with this budget is essential for error-free signal transmission. In this context, error-free transmission is a statistical value defined in the form of a maximum permissible bit error rate depending on the transmission protocol. The value is typically 10⁻¹⁰ and higher.

! Bi-directional systems

All bi-directional systems are available as single and double fibreoptic cable systems. Signals are combined and split by a wavelength multiplexer in single fibreoptic cable systems. Economical double fibreoptic cable transmission is recommended if a sufficient number of cables are installed.

! Optical budget

The optical budget reduces by 3dB when a 50/125µm fibreoptic cable is used.

MMX: The new Matrix System from eneo

The new generation of matrix systems is called MMX, bears the eneo brand and combines a matrix, quad and multi-

plexer in one unit. Designed to meet the requirements of small to medium-sized control centres, the multifunctional "3-in-11 matrix system" excels not only through its flexible fields of application, but also through its high user-friendliness, simplified installation as well as beneficial cost effectiveness. As there is no longer any need for expensive additional components such as multiplexers and quads, the network-capable MMX also considerably reduces purchase and operation costs for applications. Digital recording can be fully integrated and managed in the MMX whenever this is a system requirement.

Optimum for medium-sized applications

Expansion and adaptation of normal matrixes is normally quite expensive, but the MMX system consists of a single system module that can be programmed optionally as a master, slave or spot unit. This means that existing systems can be expanded cost-efficiently without any problems. The manufacturer states that products with a comparable functionality do not exist for medium-sized applications. Potential applications include bus and rail stations, department stores, manufacturing plants and hotels. With full scalability, eneo's MMX offers many additional functions such as motion and image loss detection, alarm out

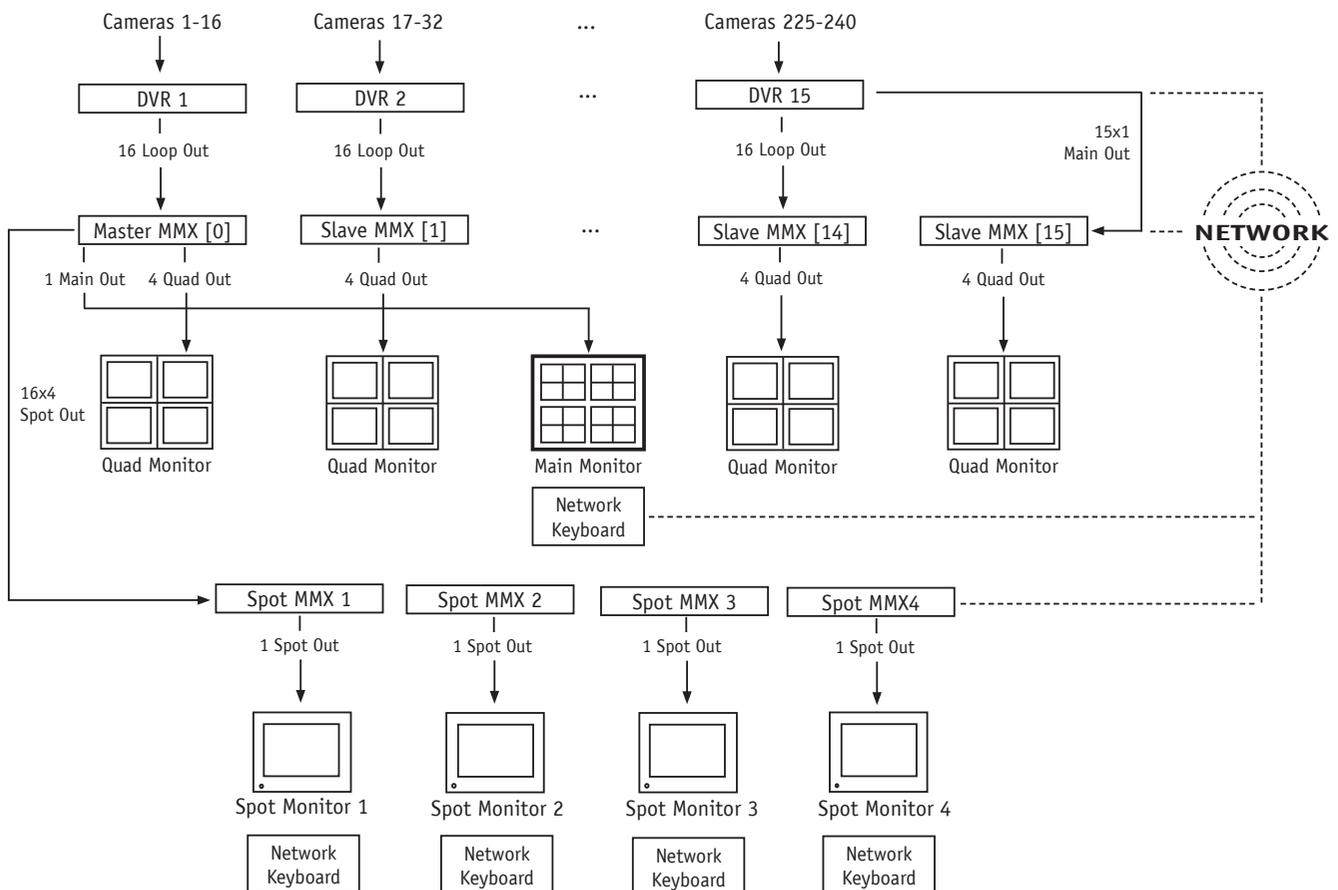

control and event notification by e-mail, all of which are easily configured over network with the user-friendly installation program.

Simple and fast configuration

Thanks to its intuitive menu prompting the MMX can be set up with a few mouse clicks by anyone who has knowledge of Windows. eneo's matrix system is based on a master MMX with any number of MMX slaves. The master supplies all information and controls the slaves. Therefore only the master is configured – regardless of how many slaves are used.

User-defined layout

It is possible to show a matrix system of 16 to 256 cameras when several MMX units are connected to each other. Operators can access live images and recordings from all installed cameras on their personal monitor. Additionally, there is no longer any need for additional quads as each MMX module has four quad outputs. Monitors connected to these outputs can be used for event monitoring as well as for continuous observation. Whilst standardised matrix units normally require further multiplexers for simultaneous replay of several images on a single monitor, the MMX has a main output upon which numerous pictures are displayed in a user-defined layout. Operators can therefore specify up to ten different layouts and select them on the keyboard. By the way, with its KBD-NSC-100 eneo provides a keyboard optimised to the MMX. The combination of both devices produces an optimal basis for an easy-to-install and flexibly expandable matrix system.

RECORDING

An overview of compression procedures

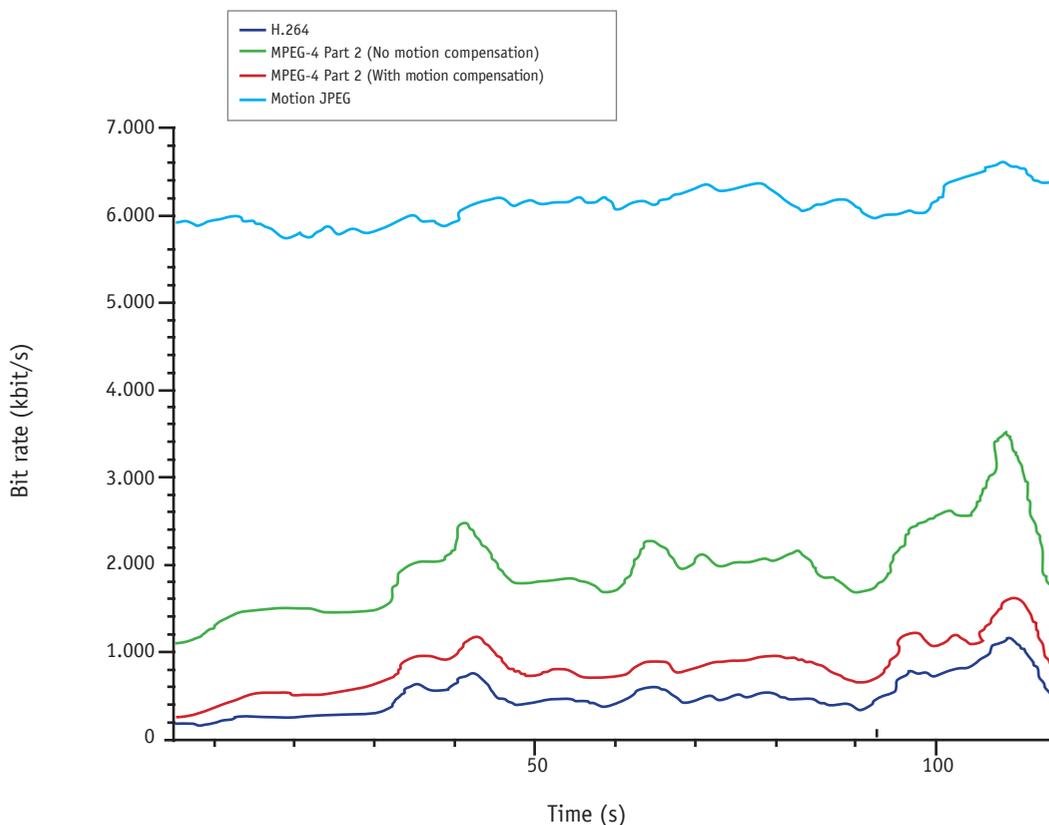

H.264/MPEG-4 AVC represents a standard for highly efficient video compression. MPEG-4/AVC differs significantly from MPEG-4/ASP. Typically, H.264 attains three times the coding efficiency of H.262 (MPEG-2) and is also designed for high-resolution image data (e.g. HDTV). Comparable quality is achieved with approximately one third of the data required for MPEG-2. However, the computation outlay is also around 2 to 3 times higher.

JPEG 2000 is based on wavelet transforms (DWT). JPEG 2000 offers both loss-free and lossy compression. Using the standard, very good compression rates can be attained for lossy image data that is to be saved. By using wavelet transforms, JPEG 2000 avoids disruptive pixelation effects at high compression, unlike JPEG-1. Instead of this, the images tend to be blurred and to have shadows where there are hard contrasts.

Motion JPEG (MJPEG) is a video codec where every individual image is compressed separately as a JPEG image. Unlike videos compressed using MPEG, the quality of those compressed with MJPEG is independent of the movement of the image. Due to the fact that all individual images are compressed, this format makes it possible to cut a video clip down to the precise image, without the need to recode it.

MPEG-2 is a generic MPEG standard for video coding with video compression and audio coding with audio compression. In both cases it is lossy compression. MPEG-2 retains the significant characteristics of MPEG-1: Separation of the colour information from the black and white image and coarsening of this information, as the human eye also perceives colour differences as being coarser than differences in brightness. When it comes to video, the MPEG-2 standard aims for higher quality and therefore better rates of data than its predecessor.

MPEG-4 is an MPEG standard that describes procedures for compression of video and audio data, among other things. Originally, the aim of MPEG-4 was to support systems with fewer resources or smaller bandwidths, with relatively small impact on quality. In addition to video decoding, some audio standards were also incorporated into the standard, for example Advanced Audio Coding (AAC), which was already standardised in MPEG-2.

! Data export

DTR/DLR3/DPR/DCR Recorders can export a maximum of 2GB video data in a single file at one time in the Minibank combined player/data format. The video material is split into several files when longer times are exported using the RAS+ software. A PC with a colour depth of 32 bits and at least DirectX 9.0c are necessary for playback of Minibank files.

! Access via Microsoft Internet Explorer

Access via Microsoft Internet Explorer is also possible for the following video recorders from eneo: DCR-16/32, DIR-41xx, DPR-2016, DTR-4xxx, DTR-6xxx, DLR3-04, DLR1.1.

! Start routine

When eneo Digital Video Recorders are switched on they check whether PAL or NTSC cameras are connected to the video inputs, and then they adjust the video mode accordingly. If a camera is not connected to the recorder when it starts up, the recorder boots into NTSC mode and the connected main monitor then only shows a B/W picture instead of colour. Therefore, please only ever start the recorder with a camera connected to attain the correct display.

! RAS Plus Mobile Software

RAS Plus Mobile Software allows access to the live imagery from DLR, DCR, DTR & DPR recorders over a PDA. Windows Mobile Version 5 or higher must be installed on the PDA.

! S-DSL connection with a symmetrical bandwidth

Our experience shows that the upload bandwidth of an ADSL internet connection (approx. 256-384 KBit/Sec.) is not fast enough for smooth display of video imagery over the internet using an eneo Digital Video Recorder. We therefore recommend a S-DSL connection with a symmetrical bandwidth of 1-2MBit.

Of course, the recorder can be addressed over a DynDNS Account by using a provider with dynamic IP, but please note that such accounts are automatically deleted after approximately four weeks without access for these optional services. For professional applications, we only recommend a connection set up over an internet provider with a fixed IP address.

The following TCP ports must be opened in the router's firewall for perfect operation over the internet: Admin: 8200, Callback: 8201, Watch: 8016, Search: 10019, Audio: 8116, Webguard: 12088.

! DIR Series Upgrade through latest Firmware

eneo has published new firmware (Release 2.0.0) for DVRs in the DIR Series. This provides the following new system enhancements:

- * Choice of H.264 or MPEG-4 compression.
- * RS-232 Text-in support
- * Covert camera support
- * Keyboard connection now possible via RS-485

Products in the tables above are sorted by: 1. Channels Video, 2. HHD (integral), 3. Type

! RAS Plus Software

With the latest RAS Plus Software you can automatically start a connection to a recorder with the required display layout. Please note that the most up-to-date firmware version must be installed on the recorder to ensure perfect operation. You can download firmware as well as software from the products section on our website.

! Ideal for mobile use

DiREX-Pro DVRs are suitable for transfer even on low bands such as WLAN, DSL, ISDN or 3G/UMTS/HSPDA, EDGE and are ideal for mobile use. The frame rate adjusts itself to the available bandwidth - but maintaining consistent video quality. Local recording is always at full speed and allows video data to be completely restored. Automatic email notifications triggered by sound, movement, alarms and power failure as well as pre-timed are all possible - complete with picture attachment.

! Not every TFT monitor is suited for CCTV

Video surveillance technology places high demands on monitors. We keep that in mind when choosing products. Thus our monitors features an optimised signal recognition time. This is important if signal sources are switched on a regular basis, e.g. when using multiplexers or multi channel digital recorders.

! Good detail definition

Only using monochrome monitors can guarantee good detail definition with a high resolution for high-resolution black and white cameras.

General Terms and Conditions of VIDEOR E. Hartig GmbH

as of 1 January 2007

1. General

- 1.1 The below-listed general terms and conditions of Videor E. Hartig GmbH (hereinafter Videor) apply to business transactions with Videor if the party ordering is an entrepreneur as defined by Art. 14, BGB (German Civil Code) or a legal entity or separate estate under public law.
- 1.2 These General Terms and Conditions of Videor shall apply exclusively. Any differing, conflicting or supplemental terms and conditions of the party ordering shall only become part of the contract if and to the extent Videor has given its express written consent. This requirement of consent applies in any case, even if Videor executes a delivery without reservation in spite of being aware of the general terms and conditions of the party ordering.
- 1.3 The party ordering is bound to his/her offer of contract for 3 weeks.
- 1.4 The contract will come into effect when Videor confirms acceptance thereof in writing or effects performance or delivery within the deadline.
- 1.5 Videor reserves its exploitation rights without restriction on all proprietary and copyrighted cost estimates, drawings and other documents (hereinafter referred to as documentation). The documentation may only be made accessible to third parties with the prior consent of Videor and must be returned to Videor without delay on request if Videor is not granted the contract.
- 1.6 The party ordering has the non-exclusive right to use standard software with the agreed performance characteristics in unaltered form on the agreed hardware. The party ordering is entitled to make back-up copies without any explicit agreement to this effect.
- 1.7 All agreements, collateral agreements, provisos, amendments and supplements to the contract must be recorded in writing in the interest of conservation of evidence.

2. Prices

- 2.1 Prices are subject to change unless fixed prices have been agreed. The Videor prices valid on the day of delivery or performance in accordance with the Videor price lists shall apply ex Videor delivery stores.
- 2.2 All prices are without discounts or any other deductions plus value-added tax at the rate valid on the date of delivery or performance.
- 2.3 The costs of packaging, loading and shipping from the Videor delivery stores are at the expense of the party ordering. When delivering goods upon which duty has not been paid, the party ordering must pay the charges levied by the customs authorities and any related costs.

3. Terms of Payment

- 3.1 With the exception of agreements made expressly to the contrary, payment is always due at the latest when the purchased items are picked up or, in the event of shipment, when they are handed over to the freight forwarder or carrier.
- 3.2 All payments must be made in cash without any deductions at a Videor paying office. Only Videor cash desks are entitled to take receipt of money. Any credit transfers may only be made to accounts held by Videor. Videor sales personnel do not have collection authority.
- 3.3 Videor reserves the right to refuse bills of exchange or cheques. Bills of exchange or cheques will only be accepted by way of payment and without any guarantee of punctual submission or timely protest. All cheque and bill of exchange fees and costs are at the expense of the party ordering and are due for immediate payment to Videor.
- 3.4 If the party ordering is in default of all or parts of his/her payments and if mature bills of exchange in particular are not honoured in time or cheques not cashed upon presentation, Videor can accelerate maturity of all claims arising from the business relationship with advance notice of one week. This also applies to bills of exchange with later maturity. All demands for payment made by Videor which arise from the business relationship will become due for immediate payment without advance notice if the party ordering discontinues his/her payments or if an application is made to open insolvency proceedings against his/her assets.
- 3.5 The party ordering has no rights of offsetting or retention unless his/her counter-claims have not been contested by Videor or established finally and absolutely.

4. Delivery – Delayed Delivery

- 4.1 In the interest of conservation of evidence, delivery times and deadlines must be agreed to in writing. With the exception of agreements made expressly to the contrary, all details of delivery times and deadlines are non-binding only and are subject to the proviso of complete and prompt delivery to Videor by advance suppliers.
- 4.2 If delivery times and deadlines which have been agreed in a non-binding manner are exceeded by more than 6 weeks, the party ordering can demand in writing that Videor make delivery within an appropriate space of time. Videor will be considered to be in default once the deadline set in this way has expired without performance. Videor can only be held liable for damage due to delays to the extent outlined in Section 9, below.
- 4.3 The prerequisite for Videor's compliance with dates and deadlines is correct and punctual fulfillment of all obligations by the party ordering. This includes in particular compliance with the agreed terms of payment and the timely receipt of all documentation, any necessary licenses and the release authorization of plans in particular to be delivered by the party ordering.

- 4.4 Partial deliveries by Videor are permissible as long as they can be reasonably expected of the party ordering.
- 4.5 Instances of force majeure entitle Videor to postpone delivery for the duration of the obstruction plus an appropriate restart period. If it becomes unreasonable for either party to fulfil the contract, that party may withdraw from the contract to that extent. Force majeure is considered to be all circumstances which make it considerably more difficult or impossible for Videor to make delivery, such as currency, trading policy or other sovereign measures, strikes, lock outs, operational disturbances (e.g. fire, mechanical breakdown, raw material or energy shortages) as well as transport route obstructions, irrespective of whether these circumstances occur at Videor, a supplier's plant or a Videor subcontractor.
- 4.6 The right is reserved by the manufacturer to make alterations to the construction, shape, colour shade and scope of delivery throughout the delivery period, provided that the purchased item is not significantly altered and the alterations can be accepted as reasonable by the party ordering. No rights can be asserted against Videor for the use of type codes or numbers for the purchased item.

5. Acceptance/Shipment – Transfer of Risk

- 5.1 The party ordering is obliged to make acceptance of the purchased item within 8 days of receipt of notification of availability or a shipping order. Shipment is made in the name, at the expense and at the risk of the party ordering. Videor is entitled to charge flatrate freight costs to cover freight expenses.
- 5.2 If the party ordering fails to make acceptance of the purchased item within 2 weeks of receipt of notification of availability, Videor can set the party ordering a deadline of 8 days in writing. Once this deadline has expired without action, Videor is entitled to withdraw from the purchase contract by means of a written declaration to this effect and/or claim damages in place of performance. If Videor claims damages in place of performance, this will amount to 20 % of the purchase price. Both parties reserve the right to provide evidence of major or minor damage.
- 5.3 If the purchased item is to be shipped and no agreements to the contrary have been made, it is left over to Videor to select the transport mode and route. If the wrong selection is made, Videor can only be held liable to the extent outlined in Section 9, below.
- 5.4 Videor is entitled but not obliged to take out transport insurance on behalf and for the account of the party ordering unless the party ordering contradicts insurance of this kind.
- 5.5 The risk, including that of accidental loss or deterioration of the purchased item, is transferred from Videor to the party ordering upon expiry of the availability deadline or, if shipped, as soon as the purchased item is delivered to the freight forwarder or carrier, but at the latest as soon as it leaves the Videor delivery store, irrespective of whether shipment is made from the place of performance or freight paid.
- 5.6 The party ordering is not entitled to refuse receipt of the purchased item due to irrelevant defects.

6. Retention of Title

- 6.1 The delivered goods (hereinafter referred to as reserved goods) will remain the property of Videor until complete payment of the purchase price has been made and all other claims made by Videor in connection with the transaction (e.g. bill of exchange costs, financing costs, interest, repair and conversion costs) have been settled.
- 6.2 For Videor, as the manufacturer as defined by Art. 950, BGB, the handling and processing of the reserved goods does not put Videor under any obligation. If the party ordering processes the goods along with other goods that do not belong to Videor, Videor is entitled to co-ownership of the manufactured object in the ratio of the invoice value of the processed reserved goods to the sum of the invoice values of all other goods used in the manufacturing process. If reserved goods are mixed or connected with other objects, thus bringing about the expiry of Videor's ownership of the reserved goods (Arts. 947, 948, BGB), it is regarded as agreed even now that the party ordering's ownership share in the mixed item or uniform object will be passed on to Videor to the extent of the invoice value of the reserved goods and that the party ordering will safeguard these goods for Videor with the diligence of a prudent businessman.
The objects created through processing, connection or mixing are reserved goods as defined by these general terms and conditions.
- 6.3 For the duration of the retention of title, the sale, pledging, transfer of ownership by way of security, rental or other relinquishment of the reserved goods to third parties which might impair the security status of Videor are only permitted with the advance, written consent of Videor, as are the alteration, processing, mixing, connection or utilization of said goods.
- 6.4 The party ordering may only sell the reserved goods in the ordinary course of business. He/she herewith transfers to Videor all claims against third parties arising from the further sale or other legal transactions which may affect the reserved goods in future, along with all ancillary rights and security interest in their total. Videor accepts the transfer.

If the reserved goods are sold after being connected to, mixed with or processed with other goods not belonging to Videor, transfer will only be to the extent of Videor's co-ownership share in the item or stock sold. If the party ordering has

a current account relationship with his/her buyer, the transfer will relate to the balance claim at the end of an accounting period.

If the reserved goods are used by the party ordering for the fulfillment of a contract for work and services or plant delivery contract, the claim arising from such a contract will be transferred in advance to Videor to the same extent that it has been determined above for claims from further sale.

The party ordering is entitled to collect the claims transferred to Videor in the ordinary course of business to the extent that he/she fulfils his/her contractual obligations towards Videor. The party ordering is not entitled to transfer or sell the claim unless he or she receives the final and complete equivalent sum of the claim.

6.5 If the value of the securities that exist for Videor exceeds not only temporarily the claims of Videor by a total of more than 20%, Videor will on demand release securities of their choice of corresponding value.

6.6 The party ordering is obliged to maintain reserved goods in an orderly condition for the duration of the retention of title. Any damage to the reserved goods caused or detected by the party ordering which occurred after the risk was transferred to him/her must be reported to Videor in writing without delay.

Any repairs required during the retention of title must be coordinated with Videor and made immediately at their request.

6.7 If the party ordering is in default of payment or he/she has not fulfilled his/her obligations in regard to the reserved goods in accordance with Section 6 of these terms and conditions, and if Videor has withdrawn from the contract because of this violation, Videor can demand the return of the reserved goods with the exclusion of all rights of retention. The right of Videor to withdraw under the conditions defined in Art. 323, BGB and demand the return of the reserved goods extends to all purchased items still covered by retention of title by Videor at the time of withdrawal.

The costs of returning and re-utilizing the reserved goods will be carried by the party ordering. The return and re-utilization costs are set individually without proof at 10 % of the re-utilization proceeds plus any VAT that may be due. The right is reserved to provide evidence of higher or lower return and re-utilization costs. The re-utilization proceeds and any down payments made on the purchase price will be offset against the claims of Videor after deduction of all costs and other claims by Videor connected with the purchase contract. The party ordering will be credited with any surpluses.

7. Liability for Material Defects

7.1 Contrary to the law, the limitation period for claims by the party ordering for material defects on newly manufactured movable items purchased from Videor by the party ordering is one year from the start of the legal limitation period. This shortened limitation period will not apply in instances where human life is lost, physical injury occurs, health is damaged or where Videor deliberately or negligently fails to comply with its duties or fraudulently conceals a defect.

7.2 If the party ordering asserts a claim for subsequent fulfillment on newly manufactured movable items due to a material defect, Videor has the option of either repairing the defect or replacing the defective item with a non-defective item.

7.3 The party ordering is not entitled to claim for expenses required for the purpose of subsequent fulfillment – in particular, transport, road, labour and material costs – if the costs increase because the delivered object was moved subsequently to a place other than the party ordering's place of business, unless the removal complies with its intended purpose.

7.4 The sale of used removable items by Videor to the party ordering is not subject to material defect liability of any kind. Any liability claims the party ordering may be asserting against Videor in instances where human life has been lost, physical injury has occurred or health has been damaged or where Videor has deliberately or negligently failed to comply with its duties or fraudulently concealed a defect are not affected by this.

7.5 The party ordering is obliged to report any material defects to Videor in writing without delay.

8. IX Industrial Property Rights and Copyright; Defects of Title

8.1 Unless agreed otherwise, Videor is only obliged to make delivery in the country in which the place of delivery is located free from any industrial property rights and copyright (hereinafter referred to as property rights) of any third parties. If a third party asserts any justified claims against the party ordering for infringement of property rights caused by any deliveries made by Videor and used in accordance with the terms of contract, Videor is liable to the party ordering as follows within the deadline set in Item 7.1:

8.1.1 At its own expense for the deliveries in question and as desired, Videor will either obtain a right of use and amend it in such a way that the property rights are not infringed, or replace it. If it is not possible for Videor to do so under appropriate conditions, the party ordering is entitled to make use of his/her legal rights of rescission or reduction.

8.1.2 Damage claims against Videor for defects of title of this kind can only be asserted as outlined in Section 9.

8.1.3 The above-mentioned obligations of Videor only exist if the party ordering notifies Videor in writing and without delay of the claims being asserted by a third party and does not acknowledge an infringement, and if Videor reserves the right to all defensive measures and compromise negotiations. If the party ordering discontinues utilization of the delivery to minimize damage or for other important reasons, he/she is obliged to inform the third party that discontinuation of utilization does not constitute acknowledgement of a property

right infringement.

8.2 The party ordering is not entitled to make any claims if he/she is responsible for the property right infringement.

8.3 Claims by the party ordering are also not permitted if the property right infringement was caused by particular specifications given by the party ordering, an application that was not foreseeable by Videor or by the fact that the delivery was altered by the party ordering or utilized together with other products not supplied by Videor.

8.4 The provisions of Section 7 apply to all other defects of title.

8.5 Further reaching claims by the party ordering against Videor and its vicarious agents or claims other than those outlined in this section for defects of title are precluded. Used movable items are sold by Videor to the party ordering under exclusion of all defect of title liability.

9. Liability

9.1 In the event of intent or gross negligence, Videor, its legal representatives or its vicarious agents will be held liable for all damage to the party ordering caused by Videor irrespective of the legal ground but in particular due to infringement of duties from the obligation and unlawful acts and for reimbursement of expenses in accordance with Art. 284 BGB.

In the event of the grossly negligent infringement of non-essential contractual obligations by simple vicarious agents, Videor may only be held liable for typical damage that was foreseeable at the time the contract was signed.

In the event of slight negligence, Videor, its legal representatives or vicarious agents will only be held liable if the damage was caused by an infringement of essential contractual obligations and only for typical damage that was foreseeable at the time the contract was signed. Videor may not be held liable in all other instances of slight negligence.

9.2 Videor is liable without restriction in all instances where Videor is responsible for the loss of human life, causing physical injury or damaging health.

9.3 The personal liability of the legal representatives, vicarious agents and company employees of Videor for damage caused by them through slight negligence is excluded.

9.4. In the event of fraudulent concealment of a defect, the acceptance of a warranty or procurement risk or in accordance with the product liability law, the liability of Videor will remain unaffected irrespective of any fault.

9.5 All damage claims by the party ordering, irrespective of the legal ground but in particular those due to unlawful acts and possible claims for reimbursement of expenses in accordance with Art. 284, BGB, fall under the statute of limitations with the expiry of the limitation deadline applicable to material damage claims in accordance with Section 7. The legal limitation regulations will apply in instances where life has been lost, physical damage has occurred or health has been impaired, in the event of intent or gross negligence and with damage claims in accordance with the product liability law.

9.6 The party ordering is obliged to record in writing and without delay any damage claims for which Videor is to be held responsible or have them recorded by a Videor representative.

10. Place of Fulfillment, Point of Delivery, Place of Jurisdiction, Assignment and Return of Packaging

10.1 The place of fulfillment is Rödermark.

10.2 The law of the Federal Republic of Germany applies. The application of UN commercial law (United Nations Convention on Contracts for the International Sale of Goods [CISG]) is excluded.

10.3 It is agreed that Frankfurt am Main shall be the exclusive place of jurisdiction for all disputes arising from the business relationship, including those arising from bill of exchange or cheque issues.

10.4 The assignment of claims against Videor requires the advance written consent of Videor.

General Terms and Conditions for the Software of VIDEOR E. Hartig GmbH (hereinafter referred to as Videor) for the Provision of Standard Software (Software GTCB)

valid as of 1 January 2007

1. Scope of application

1.1 These General Terms and Conditions apply in addition to the General Terms and Conditions of Videor to the provision of software (purchase of software) for an unlimited period of time. If software is provided for use as an integral part of a delivery of related hardware or in connection with such a delivery, these Terms and Conditions are applicable if a breach of duty or defective performance was caused by the software; the General Terms and Conditions of Videor apply to the hardware exclusively in other respects.

1.2 Insofar as these Terms and Conditions do not contain any provisions, the General Terms and Conditions of Videor are applicable which are available on the website www.videor.com. We will be pleased to send the General Terms and Conditions of Videor to customers upon request.

1.3 Videor assumes no obligation to provide software services, to maintain software or to set-up and install software with these Terms and Conditions. This requires a separate agreement.

1.4 In addition, Videor has no obligations whatsoever during any trial period granted to the customer free of charge in which he may evaluate the software before purchasing it.

2. Subject matter of the contract

2.1 The nature and the fields of application of the software are defined solely in the product description and in addition in the operating instructions, unless otherwise individually agreed.

2.2 The software is supplied exclusively in an executable form (object code) with operating instructions in the language stated in the product description and installation description; no further documentation shall be provided, unless expressly otherwise agreed. The operating instructions and installation description can also be provided electronically, in particular by the possibility of retrieving these online.

2.3 The software is supplied by providing a data carrier or, insofar as agreed or requested by the customer, by downloading it from the Internet via a link provided by Videor.

3. Excluded fields of application for software

Attention is expressly drawn to the fact that, unless expressly agreed otherwise in an individual case, the software was not developed nor planned nor produced for use in dangerous fields of application which require fault-free operation to prevent bodily harm, death or an impairment to health or damage to the environment. The software is not suitable for use in, or in connection with, energy power stations, air traffic navigation or communications, air traffic control, any other traffic control, for the operation or monitoring of medical or other vital or life-supporting or life-maintaining equipment, weaponry or similarly dangerous fields in which faults in the product can directly or indirectly lead to death, physical impairments or impairments to the health of persons or to serious physical or biological or ecological damage ("high risk activities").

4. Rights of use

4.1 The software (program, product description and operating instructions) is legally protected. Copyrights, patent rights, trademark rights and all other ancillary copyrights to the software and to other objects which Videor provides or makes accessible to the customer in the course of the initiation and implementation of the contract are exclusively due to Videor in the relationship between the parties. Insofar as third parties have rights, Videor has acquired or licensed the required rights of use and exploitation.

Upon payment in full, Videor grants the customer the right to use the software to the extent defined in the contract. Unless the field of software application is otherwise agreed, this right includes a simple right of use to operate the software at a workstation on a computer unit (simple licence) for an unlimited period. Thus the customer is authorised to install, load and execute the software on the maximum number of workstations agreed for the agreed duration of the right.

4.2 Every computer unit with a CPU is deemed to be a computer. Use in a network is permitted only if expressly agreed (multiple/multi-station licence), whereby the maximum number of simultaneous users shall be defined. This also applies if the software is not reproduced within the network. Use of the software through the provision thereof to third parties via remote data transmission, particularly in the form of Application Service Providing (ASP), is not permitted unless expressly agreed.

4.3 Simultaneous use of the software on more than the agreed number of workstations (excess use) is prohibited. The customer is obliged to immediately notify Videor of any excess use. For the period of excess use, i.e. from the beginning thereof until the conclusion of an appropriate agreement or until cessation of the excess use, the customer is obliged to pay compensation for the excess use which shall be charged for the proportionate period of time at double the price of the software used according to the price list valid at the time of the breach of the contract, whereby the parties shall take a 3-year straight-line method of depreciation as the basis for calculating the compensation. This is without prejudice to the assertion of a claim for further damages in addition to the contractual penalty. The customer is free to furnish proof that less damage occurred.

4.4 The customer may transfer the right of use to the software to a third party if he completely ceases use himself, particularly if, upon transfer of the right, he deletes, destroys or hands over to the third party any and all documentation, copies etc. Insofar as a multiple/multi-station licence was granted, this may only be transferred as an entirety. Any transfer of individual workstation authorisations under a multiple/multi-station licence results in an unagreed expansion/intensification of the use of the software and is thus expressly prohibited.

Clause 4.3 applies accordingly. Sub-licensing is prohibited.

4.5 In the event that the right of use is transferred to third parties, e.g. in the course of reselling, the customer shall inform Videor of the name and address of the recipient and draw the recipient's attention particularly to clause 3 (no high risk activities) and to the scope of the license pursuant to this clause 4.

4.6 Videor is entitled to take appropriate and effective measures to prevent prohibited reproductions or other unauthorized use. Videor shall draw attention to such measures in the product description prior to conclusion of contract. In particular, Videor is authorised to make the usability of the software contingent on the use of uniquely marked hardware (e.g. dongle/hardlock), which means that, technically, the software can be used only in conjunction with this hardware component. Videor is also authorised to make the usability of the software contingent on the prior personalized registration of the user via an online registration system operated by the software producer. The rights of the customer under Section 69 d (2) and (3) and Section 69 e UrhG [German Copyright Act] remain unaffected.

4.7 The rights granted are subject to the condition precedent that the purchase price is paid in full.

5. Customer's duties to cooperate

5.1 The customer is responsible for ensuring that programs and data are saved on a regular basis. The customer shall take adequate precautions in the event that the program fails to work completely or partly (e.g. by data back up, fault diagnosis, regular checking of results). He is responsible for ensuring that the work environment of the program is operating. If the customer acts in breach of these obligations, Videor shall not be liable if damage is caused as a result thereof. In particular, Videor shall not be liable for the recovery of lost or damaged data or programs.

5.2 The customer is obliged to refrain from any and all use of the software in high risk activities (clause 3).

6. Defects in title

6.1 Claims based on defects in title are governed by clause 8 of the General Terms and Conditions of Videor and the following clause 7 of these General Terms and Conditions for Software.

6.2 The customer shall immediately notify Videor in writing if third parties assert proprietary rights (e.g. copyrights or patent rights) against him. The customer shall not recognise the infringement of the proprietary right asserted by third parties and shall leave any and all disputes, including any out-of-court settlements, either to Videor or conduct such only after consulting Videor. Videor shall pay the necessary court and lawyers' fees incurred by the customer as a result of defending rights. Insofar as the customer is responsible for the infringement of the proprietary right himself, claims against Videor are excluded.

7. Defects in quality

7.1 A warranty period of 12 months is granted for the software. This does not apply to the right of recourse under Section 478 BGB [German Civil Code].

7.2 Only proven and reproducible deviations from the specification when using the software in accordance with the contract are deemed to be defects which are not defects in title. A defect is not considered to exist if it does not arise in the last version of the software supplied and the customer can be reasonably expected to use such.

7.3 The customer is obliged to immediately examine all items supplied by Videor after delivery in accordance with provisions under commercial law (Section 377 HGB [German Commercial Code] and to immediately notify Videor in writing of any defects. The defect and the respective data processing environment must be described as exactly as possible in such notification. Further requirements pursuant to Section 377 HGB remain unaffected.

7.4 Claims based on defects are not deemed to exist

- in the case of damage occurring as a result of faulty or negligent treatment by the customer,

- for consequences arising from alterations made by the customer or third parties, - for software which was expanded by the customer or a third party beyond an interface provided for this purpose by Videor or the software manufacturer, if the defect is based on this,

- if the software provided is not compatible with the data processing software used by the customer, unless expressly described as compatible in the product description or operating instructions.

7.5 If the software has a defect, Videor shall initially be given the opportunity of rendering subsequent performance within a reasonable period. Videor has the option of choosing whether to render subsequent performance by rectifying the defect (subsequent improvement) or by supplying a replacement.

7.6 Unless Videor chooses any other kind of subsequent performance, subsequent performance shall be effected by rectifying a software defect as follows:

7.6.1 Videor shall provide a new revision level (update) or a new version (upgrade) of the software as a replacement for use as appropriate if available at Videor or if this can be obtained with a reasonable amount of effort. Otherwise the defect shall be rectified at the old revision level.

7.6.2 Until provision of the update or upgrade, Videor shall make an interim solution available to the customer to bypass the defect if the continuance of the defect is unacceptable for the customer, for example because he is no longer able to process urgent tasks as a result of the defect.

7.6.3 If a data carrier or the documentation supplied is defective, Videor shall replace

these with a substitute which is free from defects.

- 7.6.4 At the option of Videor, the defect shall be rectified on the premises of Videor or on the customer's premises. Should Videor choose to rectify the defect on the customer's premises, the latter shall make the hardware and software and any other necessary operating states (including the required computer time) available with suitable operating personnel. In addition, the customer shall also provide to Videor the documents and information at its disposal required to rectify the defect.
- 7.7 If the subsequent performance fails, the customer may cancel the contract or reduce the remuneration – irrespective of any claims for damages based on the General Terms and Conditions. The customer only has a right of cancellation and a claim for damages instead of performance based on non-performance or performance not rendered as owed in the event of serious defects.
- 7.8 Where a notice of defects has been given, the customer may only retain payments to an extent which bears a reasonable relation to the defects that have arisen.
- 7.9 Where a notice of defects has been wrongfully given, Videor is entitled to demand that the customer refunds the expenditure incurred to examine the defect. In particular, Videor may demand the additional costs incurred as a result of a modification of the software, use thereof outside the prescribed environment or incorrect operation thereof. The burden of proof lies with the customer. Section 254 BGB [German Civil Code] applies mutatis mutandis.
- 7.10 In other respects, clause 9 of the General Terms and Conditions of Videor applies to claims for damages. Any further claims of the customer against Videor or its vicarious agents are excluded.

8. Secrecy, Data Protection

- 8.1 The subject matter of the contract, records and documents, proposals, test programs etc. of Videor which are made accessible to the customer prior to or after conclusion of contract are considered to be intellectual property and a business or trade secret of Videor and must be kept secret in accordance with the following provisions shown in this clause 8.
- 8.2 The parties to the contract undertake to treat as confidential all objects (e.g. software, documents and records, information) which they receive from the other party respectively or gain knowledge of prior to or during the implementation of the contract and which are legally protected or contain business or trade secrets or are marked as confidential, also after the end of the contract, unless they become publicly known without any infringement of this duty to maintain secrecy. The parties to the contract shall store and safeguard these objects in such a manner that it is impossible for third parties to gain access thereto.
- 8.3 The customer shall only make the subject matter of the contract accessible to employees and other third parties which require access to carry out the tasks assigned to them. He shall instruct such persons of the necessity to keep the objects secret.
- 8.4 Videor shall store the data of the customer required to process the transactions in compliance with data protection laws.

Conditions of use for the „Partner’s Area” of the website

February 2004

Videor E. Hartig GmbH (Hereinafter referred to as Videor) makes an information and ordering system available to its authorised marketing partner via its own company website only within the framework of these conditions of use.

1. Right to admission / confidentiality

When it acknowledges the current conditions of use, the marketing partner receives a right to admission to the partner’s area of the website. This right to admission is awarded to each of the client’s business contacts that has been registered with Videor, and consists of the client number, a user name and a password. The marketing partner nominates at least one administrator, who manages its employees’ authorisations. The marketing partner may only authorise trustworthy employees to undertake administration and place orders, and is itself responsible for the authorisation profile of its employees. All rights to admission must be kept confidential by the marketing partner and its employees, and are not to be passed on to third parties. The marketing partner undertakes, when an employee has left its company, to delete his or her access immediately.

2. Orders

Orders conveyed electronically via the website and order confirmations received count as having been placed in writing and signed, and the user recognition carried in them counts as proof of the sender’s identity. This means that the marketing partner individualised by means of the user recognition is legally bound to each order placed under its name. The marketing partner must check its order details carefully.

3. Order processing

Quotations and details of prices made by Videor electronically are given without obligation and are subject to alteration. Only on receipt of the electronic order confirmation and/or of a written order confirmation from Videor may the marketing partner assume that Videor has received, and is processing, the order it has placed. A contract of sale therefore only materialises with Videor’s electronic and/or written order confirmation, or at the latest at the marketing partner’s acceptance of the delivery. In the case of electronic ordering of merchandise, the current Videor price contained in the electronic and/or written order confirmation and other conditions (such as freight costs, packaging costs or customer discounts) apply. Daily control of incoming order confirmations is incumbent on the marketing partner, which undertakes to check these immediately and, if necessary, contradict them.

4. General industrial property rights

The marketing partner undertakes to observe all Videor’s industrial property rights, and this applies particularly to its employees. It is at any time conceded to the marketing partner, revocably, that it may allow the information put at its disposal in the context of the partner’s area of the website (with the exception of the electronic fact sheets) to flow into whatever electronic merchandise control system it uses.

Any use should be made exclusively in the context of, and for the purposes of, data maintenance for the customer’s own electronic merchandise control database. With respect to this possible use the marketing partner is, however, forbidden from disclosing to third parties the logos and typefaces used by Videor and the availability of its products. The marketing partner is forbidden from using the information other than for this specified purpose and must impose a corresponding obligation on its employees.

5. Liability

Videor endeavours to update the information made available on each working day, but assumes no liability for the accuracy in terms of content of the information made available on the website. In particular, only the prices detailed and the conditions in Videor’s order confirmation are legally binding. The marketing partner is aware that Internet-based services are quite often subject to crashes that are outside Videor’s control. It assumes in this respect no guarantee for the uninterrupted functional capability of the website. Videor is not liable for the loss of information or the destruction of data in the course of its transmission. In the event of objective and comprehensible indications that a transmission has not been made, or has been made inaccurately or incompletely, the business partners will inform each other, reciprocally and immediately. It is incumbent on the marketing partner to have available the necessary and functionally capable means of access, and in particular the hardware and software and the necessary Internet browser. These means of access lie in the marketing partner’s area of responsibility, and the marketing partner also itself bears all the costs of gaining access to the Internet and the costs of transmission. The marketing partner is itself responsible for controlling access to its network, for the security and protection of the files of its computers and of its means of transmission. The marketing partner is, in particular, obliged to take protective measures for the purposes of data security that are appropriate and in line with the latest technology.

6. Term

Videor grants access to the partner’s area of the website, subject to compliance with these conditions of use, for an unlimited period of time. When the marketing partnership comes to an end, if there is any breach or misuse of these conditions of use, or if there are any other justified reasons for doing so, Videor reserves the right, without giving any period of notice, to block access to the partner’s area of the website.

7. Miscellaneous

The current version of the General Terms and Conditions of Videor E. Hartig GmbH applies otherwise. German law applies, and Rödermark is the place of jurisdiction.

Yes, I declare therewith my agreement with the conditions of use for the „Partner’s Area” of Videor’s website.

Dept.

Service at VIDEOR: Large portfolio of products and services

We have made our Service Department fit for the future with the move of this important department into the newly constructed TechCenter.

Optimum working conditions

In addition to the more generous space, which gives much room for expansion and allows greater spare parts storage, our planning centred on the re-equipment and optimal location of all workstations with the same equipment and functionalities. Product tests are therefore always made in absolutely identical conditions without prior workstation conversion being necessary. Test comparability is increased and differences in product quality therefore become even more apparent – an important point for quality assurance.

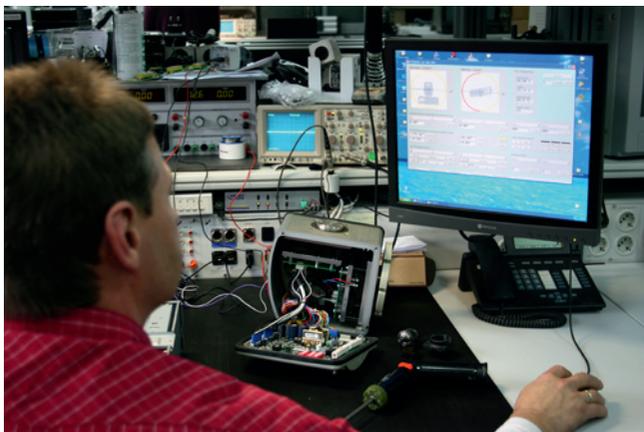

Great value was also placed on optimum lighting, the most important features of the re-equipment, as the best possible illumination is of course needed when working in particular on miniature devices.

Central signal distribution – also HD/SDI

All signals are distributed centrally through an Axon signal distributor, which allows access from all workstations. And this applies to all formats – even HD/SDI. Outside devices are also connected via fibre-optic components, so tests meeting normal requirements of real-life conditions can be carried out at any time. An intranet has been installed solely for the Service Department for its network components.

Exchange service

As an alternative to a repair, you can also take advantage of our exchange service. You are given an exchange unit instead of your repaired equipment, so you don't have to wait for the repair to be completed. The exchange service is free of charge during the warranty period. Outside of the warranty period we charge our reasonable service rates (which would also be the same as for a repair) for the exchange service. In special cases you also have the option of using our exchange service as a

To finalize repair the pan & tilt head has to pass through functional tests.

Generous space with re-equipped workstations

The direct dialogue between customer and service technician clarifies possible problems and causes of fault.

pre-exchange service: we send you an exchange unit, and upon its receipt you simply send the defective unit to us.

Service flat fees

We have introduced flat fees so that you can also plan your repairs with reliability. For instance, you can establish in advance the price of a repair to your camera or recorder. You can find

All workstations are provided with the same equipment.

these reasonable service flat fees ready to download from our website.

! Services for Broadcast Products

In addition to services for our security customers, we of course also offer extensive services for broadcast products.

Official Fujinon service centre

We are – as the exclusive dealer for Germany and Austria – an official Fujinon service centre and our lens specialists will be happy to deal with all issues and needs on your Fujinon lenses. Regardless of whether it is a repair or maintenance.

Leasing Pool with Lenses

We can quickly send you a replacement lens from our leasing pool stock of normally used lenses should a repair last for some time.

TVlogic

Repairs to TVlogic monitors are normally carried out directly at VIDEOR, so that no waiting time arises through dispatch to the manufacturer. And our service technicians can of course also carry out professional colour calibration.

Naturally, we will also be delighted to help you in all service aspects for all the broadcast products we sell, and we deal directly with manufacturers for your maintenance or repair requests.

Return Procedure

Dear customer,

We hope, you are happy with our products and services. If it is nonetheless necessary to send something back to us, please note the following description regarding our RMA procedure. We want to process your returns as fast and trouble-free as possible.

Step 1

Only in case of transport damages: Very important!

- Report the damage to the delivery company immediately. If you do not do this your insurance coverage will become invalid.
- If the delivery company does not want to check the damage you can return the damaged goods to Videor.
(cf. step 2).

Only in case of sample or loan consignment

Please use the RMA No. stated on the delivery note!

Step 2

Issue of an RMA No.

- Please contact us for an RMA No. for your return

Tel. No. 0870 7749944

- Alternatively, you can send the completed RMA form on the next page to the Fax No. 0870 7749955. You will then receive an RMA No. from us or we will call back.

• Please note that returns without an RMA No. cannot be processed and will be sent back to you.

- The issued RMA No. applies for a period of 14 days.

Step 3

RMA Form

- Enter this RMA No. in the respective field on the RMA form and fill in the form completely.
- Please state the number for the return reason on the form and give a detailed description in case of repairs, modifications or transport damages.
- You can find this form on our website at www.videor.com

Step 4

Return Shipment

- Include a completed RMA form with your return consignment, together with a copy of the delivery note or invoice.
- Write the RMA No. on the outside of the package. Please do **not** write the RMA No. on the original product packaging.
- The goods must be properly packaged.
- Send the package carriage paid to the following address:

*Videor E. Hartig GmbH
Carl-Zeiss-Straße 8
63322 Rödermark
Germany*
