## MONITOR MOUNTS

Videotec mounts have been designed to support firmly the weight of monitors, conferring at the same time a nice and modern aspect to the whole. Entirely made of aluminium painted with epoxypolyester powder, they offer a wide range of adjustments so that they can be adapted to monitors with the most various shape. They consist of modular elements, which are the same for all mounts, such as for example the mounting accessories. The mounting system with tie-rods and corner adaptors covered with rubber prevents the monitor from being damaged.
