

# Defem CombiRack™ 19"

07

## There will always be a next time

Defem is a part of AB Wibe in Sweden. Defem consists of two product areas: Defem Wire Tray system for cable channelling and Defem CombiRack for Tele- and Datacom technical room interiors. Tele- and Datacom network operators in more than 40 countries use Defem. One of their most critical demands is flexibility; any installation shall be simple to be moved, changed or extended. They know that there will always be a next time. New extensions must fit to old installations. As a hand fits in a glove.

AB Wibe was founded in 1929 and has ever since been the market leader in Scandinavia. It created the first cable ladder some 75 years ago and it now presents a complete programme of cable ladders, cable trays, lighting supports, mounting rails, industrial and office sub-ceilings. Wibe is also an important manufacturer of Masts and Towers for communication and lighting. The mobile masts are delivered all over the world for advanced applications in Telecom and in defence industry.

Wibe is a part of Schneider Electric SA, the international electrical group with more than 85 000 employees in more than 135 countries.

# The smart IT Room - Defem CombiRack™ 19"!

## Your new IT room

You have two basic requirements:  
Flexible racking.  
Flexible cable management.

With Defem CombiRack you get both.  
In One Complete System.

And you want it simple.  
For build-up, extension and  
maintenance.

With Defem CombiRack, you assemble  
the racks to suit the room and the cable  
channels to suit the racks.  
"A Triumph of Simplicity."

You know that the IT room  
is never static.

With Defem CombiRack you get the  
smart IT room.

# Safe Cable Channelling

## Equipotential Bonding

The complete structure of Defem CombiRack and Wire Trays is a conductor for equipotential bonding.

One example: The U-bar with joining fitting has the resistance 0,495 mΩ/m.

A Defem Wire Tray, 422 mm with joining has the resistance 0,580 mΩ/m.

A 40 mm<sup>2</sup> copper cable has 0,672 mΩ/m.

Safety distance between power and signal cables with power tray at separate level.

The complete structure can be used as an Equipotential Conductor with connection to ground.

More information at [www.defem.se](http://www.defem.se)

## The Total Concept for IT technical rooms

**Flat pack delivery** - the components are easy to transport and move. Especially in tight areas such as elevators, staircases and narrow doorways.

**Simple build-up** - with the mounting frame tool, it is possible for one person to make the complete installation.

**Efficient cooling** - no risk of "heat pockets". It is easy to direct cooling air to equipment in any direction you choose.

**Full use of space** - with Defem CombiRack, you use the available space in an optimal way. Racks are integrated into each other, thereby saving one rack side installation and corresponding floor space. You create the precise width by freely choosing between 19-21-23 inch and ETSI. You use available height by extending the rack upwards. And you can increase flexibility of depth by using the Telescopic adapter, etc.

**Full overview/Full control** - with Defem CombiRack you are the master of the room. You get full access to all equipment, all connectors, all cabling. You will be able to move, add and change. Everything is within your reach. Nothing is hidden. You have created the IT room for full future flexibility.

Contains Calculation Program, Manuals and Instruction Movies.

# CombiRack-concept

## The Total concept for Tele-and Datacom Technical rooms

Defem CombiRack is designed as a mechanical system for both racking and cable channelling. By installing Defem U-bars and Defem Wire Trays onto the Defem CombiRack, you design a complete and integrated structure.

By constructing the CombiRack with the Defem Multi-level concept, you avoid future cable congestion and you secure future manageability and control of the room. The concept is based on separate tray levels for cable dropping down into racks in the same row (rack tray). Cables going from one rack row

to another (bridge tray) and a separate power tray level at safety distance.

The Multi-level concept allows you to move, add and change cables without problem. As no cables will cross and lock each other, the future flexibility is assured.

The Defem Radius Limiters and the Defem separation system protects and separates cables in a very simple and flexible way. These products and the Defem Wire Trays are shown in the Defem Wire Tray Manual.

# Mounting examples

Here are some examples of how you can mount the CombiRack system. With racks and wire cable trays in the same material and in the same structure, you get a total IT room interior system that gives overview, access and safety. The Defem Wire Trays are installed with the Multi-Level concept and bend radius protectors. In this way, you design a flexible and secure room. As you need it to be.

Recommended mounting methods:

- 1) Defem Wire Tray above CombiRack and onto wall with Angled Fitting B27. In this case you only use one of the 600 mm U-bars on top of the CombiRack.
- 2) Defem U-bar onto ceiling or wall with Angle Fitting B62.
- 3) For securing 19" width, mount one Cable Duct horizontal B2469 or a 4-point shelf at the bottom of the CombiRack

CombiRack

Add-On-Rack

# Mounting Accessories

**Mounting Frame**  
The simple tool for securing the next rack side  
White knobs horizontally = 19"  
Black knobs horizontally = ETSI
