Our company is member of the Eurovent certification program.
The MWC™ Lennox chillers are tested and rated in accordance with Eurovent certification program.

Our products comply with the European standards.

Product designed and manufactured under a quality management system certified ISO 9001.

All the technical and technological information contained in this manual, including any drawing and technical descriptions provided by us, remain the property of Lennox and must not be utilised (except in operation of this product), reproduced, issued to or made available to third parties without the prior written agreement of Lennox.

Water cooled liquid chiller for indoor installation**GENERAL CHARACTERISTICS OF THE UNIT**

The MWC unit is designed for industrial and commercial applications where customers require reduced total cost of ownership for new air conditioning equipment.

As main characteristics the MWC unit offers multi scroll R410A compressors with two circuits for safety operation and oversized heat exchangers for high full and part load energy performances (Class B efficiency / ESEER > 6.0).

The MWC is the solution for indoor installation. Thanks to very compact dimensions and limited footprint MWC can be installed easily into any technical room.

The MWC is available in 2 main versions to meet all customer requirements and applications :

- MWC version is the water-cooled chiller. This version can be used for air conditioning applications in association with a separate dry-cooler or using ground water. The MWC version can also be used for heating applications. With the "hot water set point control" option the MWC range can supply hot water up to +50°C.
- MRC version is the split version without condenser. This version can be used for air conditioning applications in association with a remote air-cooled condenser

REFRIGERANT CIRCUIT

MWC is using R410A refrigerant in 2 independent circuits that allows operation at 50% of the capacity in case of issue on one circuit.

Each circuit includes:

- A refrigerant charge reduced by 30% thanks to the use of R410A combined with plate heat exchanger
- Suction piping with thermal insulation.
- Moisture sight glass on the MRC version
- Filter drier with removable cartridge filter.
- Thermostatic valve or electronic expansion valve (optional from size 180 to 570, standard on size 650 & 720).
- Temperature sensors and pressure transducers.
- Leak-tight refrigerant circuit with brazing carried out under nitrogen by certified technicians.
- Each refrigerant circuit is pressure and leak tested with a Hydrogen/Nitrogen mixture, and vacuumed before being charged with refrigerant. All units are then subjected to a complete functional and operational run test to guarantee perfect sealing before leaving the factory.

COMPRESSOR

MWC is using R410A vibration-free compliant® scroll compressors to guarantee a low operating sound level, a high durability and reliability and no maintenance.

- Exclusive Compliant® Scroll design with both axial and radial compliance to increase compressor operation tolerance to liquid refrigerant, substantially improving durability and reliability.
- Motor cooled by suction gas.
- Electronic control of the compressor discharge temperature.
- Motor protection device against high temperature or over current situations.
- Discharge non-return valve.
- Compressors assembly installed on an independent chassis supported by anti-vibration mountings.
- Optional sound-proofed panel enclosures to reduce noise emissions.

WATER HEAT EXCHANGER (EVAPORATOR AND CONDENSER)

MWC is using stainless steel brazed plate heat exchangers with true dual circuit.

- Copper brazed stainless steel plate heat exchanger.
- 13 mm closed cell thermal foam insulation.
- Evaporator protected against freezing risks thanks to an electronic water flow switch
- Condenser protected against low condensing temperature thanks to a 0-10 V output signal available from the controller to control a condenser water inlet valve (Not from Lennox supply).

CASING/CHASSIS

- Chassis made of galvanised steel sheet metal painted with a RAL 7016 (grey) powdered polyester paint.
- Optional casing with removable panels made of galvanised steel sheet metal painted with a RAL 7016 (grey) powdered polyester paint.

ELECTRICAL BOX

The MWC is designed for 400V/3/50Hz supply.

- Unit electrical cabinet, components and wiring in compliance with EN 60204-1 electrical directive.
- 400V/3/50Hz power supply (without neutral) with a single point of power connection.
- IP24 protection class.
- Recognized brand electrical components for ease of maintenance.
- Main on/off switch mounted on the front panel.
- DC50 user interface mounted on the front panel.
- 400/24 V transformer to supply the control circuit.
- Labelled electrical wires to facilitate maintenance and diagnostic.
- Optional power and control circuit for the pumps.

CONTROL

CLIMATIC™ microprocessor based control is providing the following functions:

- 4 scheduling time zones per day over 7 days to allow energy consumption management according to the building use and environmental constraints.
- PI control of the water temperature with operating time equalisation of the compressors.
- Intelligent advanced control algorithm to protect the compressors against excessive short-cycling and to allow operation of the unit without buffer tank in most comfort air conditioning applications (e.g. unit with fan-coils). Refer to minimum installation water loop volume recommendations.
- Water pump control with operating time equalization and automatic change-over in case of a pump fault (Twin pump only).
- Master/slave or cascade control of two chillers operating in parallel with operating time equalization and automatic change-over in case of a unit fault.

CLIMATIC™ is pre-factory configured with default settings allowing a fast commissioning on site. The DC50™ user interface with graphical display is easy to use, intuitive. Main customer parameters can be read or modified without main power shut-off (Entering/leaving water temperatures, alarms, water set-points, high and low pressure readings).

The DS50™ service display (optional) is a "plug and play" controller that allows service people to read and modify all unit parameters (Unit settings, operating time and number of compressor starts, low and high pressure reading, read the history of last 32 faults...).

COMMUNICATION

The control board is equipped with a RS485 serial communication port to allow remote management through communication bus.

According to the wished communication protocol, our control board can be fitted with ModBUS®, LonWorks® or BacNET® communication interface (options).

The main control board has free dry contacts that allow remote control of the unit by wired cable:

- Remote on/off of the unit.
- Remote alarm reset to re-start the unit.
- Alarm or alert indications.
- Free customer contact.

With the optional extension board BE50, it is possible to get additional customized digital or analog inputs/outputs for remote control of the unit:

- Fault pumps (dry contact).
- Operation indication at 100% on circuit 1 or 2 (dry contact).
- Dual water set-point management (dry contact).
- Force heating or cooling mode (24V AC input).
- Power limitation by disabling circuit 1 or 2 (24V AC input).
- Force unoccupied mode (24V AC input).
- Water set-point offset based on a 4-20mA signal.

DIRECTIVES

The unit is built to meet European norms and standards & Eurovent certification performance standards.

- . DI 97/23/CE Pressure Equipment Directive.
- . DI 98/37/CE Machinery Directive.
- . DI 73/23/CE Low Voltage Directive.
- . DI 89/336/CE Electro Magnetic Compatibility Directive
- . EN 378-2 Safety and Environmental Directive.
- . The European Restriction of the Use of Certain Hazardous Substances (RoHS).

OPTIONS	DESCRIPTION	ADVANTAGES	MODELS
Control/Power electrical equipment of single evaporator pump	Unit equipped with electrical power and control circuit for one single speed pump	Quick start-up on job site.	MWC/MRC 180 ► 720
Control/Power electrical equipment of dual evaporator pump	Unit equipped with electrical power and control circuit for dual single speed pumps.	Quick start-up on job site.	MWC/MRC 180 ► 720
Control/Power electrical equipment of single condenser pump	Unit equipped with electrical power and control circuit for one single speed pump	Quick start-up on job site.	MWC 180 ► 720
Control/Power electrical equipment of dual condenser pump	Unit equipped with electrical power and control circuit for dual single speed pumps.	Quick start-up on job site.	MWC 180 ► 720
Electronic expansion valve	Unit equipped with an electronic expansion valve for smooth operation in every temperature conditions	Allows applications with changing temperature conditions.	MWC 180 ► 570
Evaporator filter (supplied loose)	1000 microns water filter delivered with piping and Victaulic connections.	This protection must be fitted to protect the evaporator from any possible impurities.	MWC/MRC 180 ► 720
Condenser filter (supplied loose)	1000 microns water filter delivered with piping and Victaulic connections.	This protection must be fitted to protect the condenser from any possible impurities.	MWC 180 ► 720
Evaporator flange connections (supplied loose)	Two connection sleeves with Victaulic groove and flange on opposite side.	Allow easy connection with flanges on customer side.	MWC/MRC 180 ► 720
Condenser flange connections (supplied loose)	Two connection sleeves with Victaulic groove and flange on opposite side	Allow easy connection with flanges on customer side.	MWC 180 ► 720
Hot water set-point control (Heat pump mode)	Unit equipped with insulated heat exchanger and hot water sensor on condenser side for heating purpose.	Allow heat pump operation.	MWC 180 ► 720
DC50™ remote comfort display (supply loose)	Customer display located at 600 meters maximum from the unit.	Remote customer parameter reading and modification.	MWC/MRC 180 ► 720
DS50™ service display (supply loose)	Plug and play display delivered with 1 meter cable and connector for quick connection on Climatic controller.	Display for service technicians only.	MWC/MRC 180 ► 720
Modbus communication interface	Communication card using ModBus/JBus protocol	Communication interface with a building management system.	MWC/MRC 180 ► 720
LonWorks® communication interface	Communication card using LonTalk® protocol.	Communication interface with a building management system.	MWC/MRC 180 ► 720

OPTIONS	DESCRIPTION	ADVANTAGES	MODELS
BACnet® communication interface	Communication card using Bacnet® protocol.	Communication interface with a building management system.	MWC/MRC 180 ► 720
Adalink™ supervision (Customer friendly web based supervision)	Electronic board with RS485 cables, RJ11 phone cable, Ethernet cable and power supply cable.	Remote supervision of the unit via an intuitive web page.	MWC/MRC 180 ► 720
BE50™ extension board for additional inputs/outputs	Electronic extension board with additional analog inputs (4), digital inputs (4) and digital outputs (4). See control manual.	Relay card for remote control and alarm report using dry contacts, 24 Vac or 4-20 mA signals.	MWC/MRC 180 ► 720
Anti-vibration mounts (supplied loose)	Rubber anti-vibration mounts to be mounted under the unit.	Reduction of the transmission of vibration to the ground.	MWC/MRC 180 ► 720
Panel enclosure (compressors)	Unit equipped with removable panels around the compressors to reduce sound level.	Reduction of the unit sound power level.	MWC/MRC 180 ► 720

OPERATING LIMITS on page 13

EVAPORATORS CURVE

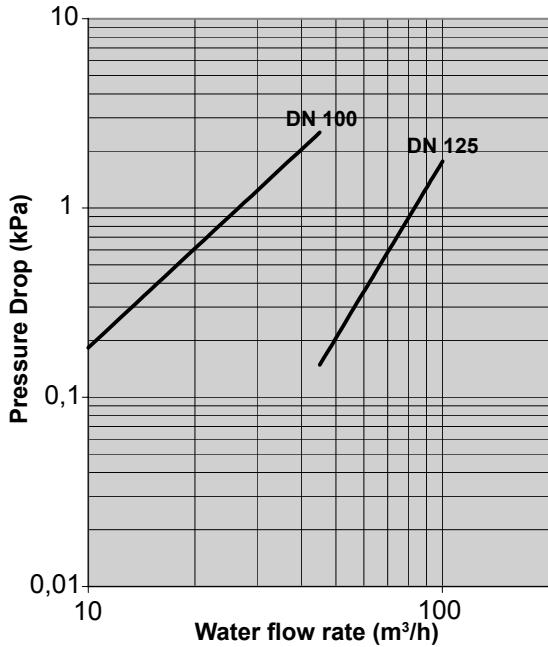

Pressure drops are given for information only. A tolerance of +/- 20kPa must be considered when selecting water pumps.

CONDENSER CURVE

FILTER CURVE

MWC	Curves		
	Evaporator	Condenser	Filter
180	A	A	DN100
230	B	B	DN100
280	B	C	DN100
330	C	C	DN100
380	C	D	DN100
450	D	E	DN125
510	D	F	DN125
570	E	G	DN125
650	E	H	DN125
720	E	H	DN125

MINIMUM WATER CONTENT OF AN INSTALLATION

Thanks to multi step capacity control and smart anti-short compressor cycling, MWC™ can work with minimum water loop volume as defined here below. This can eliminate the need for a buffer tank in most of air-conditioning applications (e.g. MWC™ application with fan-coil units). :

$$V_{\text{mini}} = 86 \times Q / (\text{Nstages} \times D_t)$$

Where :	V	Minimum water content of the installation
	Q	Cooling capacity of the chiller
	Nstage	Number of control steps available in the unit
	Dt	Maximum acceptable temperature rise ($D_t = 6^\circ\text{C}$ for an air conditioning application)

Important note: In case MWC™ is used in air-conditioning applications with a short water system (e.g. MWC™ application with air handling units) or in case MWC™ is used for industrial process cooling, it is mandatory to use a buffer tank.

MINIMUM WATER CONTENT OF AN INSTALLATION

Unit Size	Number of stages	Mini water volume (l)	
		MWC	
180	4	645	
230	5	659	
280	6	669	
330	5	946	
380	4	1362	
450	6	1075	
510	6	1218	
570	6	1362	
650	6	1553	
720	6	1720	

Note : The volume of the condenser water loop has no impact on the chiller operation. In heat pump operation (with hot water set point control option) the minimum volume of the condenser water loop must be calculated based on the heating capacity using the same formula.

GLYCOL CORRECTION FACTOR

Minimum ambient temperature or water outlet temperature	Ethylene glycol	Pressure drop	Water flow	CAPACITIES	
				Cooling	Heating
+ 5°C ► 0°C	10%	1,05	1,02	0,99	0,994
0°C ► -5°C	20%	1,10	1,05	0,98	0,993
- 5°C ► -10°C	30%	1,15	1,08	0,97	0,99
- 10°C ► -15°C	35%	1,18	1,10	0,96	0,987

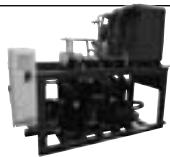

Example : 10% glycol

Minimum flow : $1,19 \text{ m}^3/\text{h} \times 1,02$

Pressure drop x 1,07

System capacity x 0,99
